Zeus++ David F. Robinson,1999 A User s Manual for the Zeus Flowfield Analysis tool is provided along with a tutorial for setting up and executing a missile geometry with control surfaces The tool solves the three dimensional Euler equations to calculate the inviscid flowfield about the geometry This inviscid solution is then supplied as input to an integral boundary layer solver which calculates the effects of viscosity on the body Finally if a more in depth solution is desired Zeus can be used to generate a computational domain for use in a full Navier Stokes solver By applying the Zeus tool computational analyses of complex three dimensional missile geometries can be performed on a personal computer in a matter of minutes In addition a computational grid suitable for a full Navier Stokes solver can be generated in approximately 10 min This represents significant savings in both manpower and computational costs typically associated with computational fluid dynamics
