GPU Parallel Program Development Using CUDA Tolga Soyata, 2018-01-19 GPU Parallel Program Development using CUDA teaches GPU programming by showing the differences among different families of GPUs This approach prepares the reader for the next generation and future generations of GPUs The book emphasizes concepts that will remain relevant for a long time rather than concepts that are platform specific At the same time the book also provides platform dependent explanations that are as valuable as generalized GPU concepts The book consists of three separate parts it starts by explaining parallelism using CPU multi threading in Part I A few simple programs are used to demonstrate the concept of dividing a large task into multiple parallel sub tasks and mapping them to CPU threads Multiple ways of parallelizing the same task are analyzed and their pros cons are studied in terms of both core and memory operation Part II of the book introduces GPU massive parallelism The same programs are parallelized on multiple Nvidia GPU platforms and the same performance analysis is repeated Because the core and memory structures of CPUs and GPUs are different the results differ in interesting ways The end goal is to make programmers aware of all the good ideas as well as the bad ideas so readers can apply the good ideas and avoid the bad ideas in their own programs Part III of the book provides pointer for readers who want to expand their horizons It provides a brief introduction to popular CUDA libraries such as cuBLAS cuFFT NPP and Thrust the OpenCL programming language an overview of GPU programming using other programming languages and API libraries such as Python OpenCV OpenGL and Apple s Swift and Metal and the deep learning library cuDNN Algorithms and Architectures for Parallel Processing Yang Xiang, Ivan Stojmenovic, Bernady O. Apduhan, Guojun Wang, Koji Nakano, Albert Y. Zomaya, 2012-09-04 The two volume set LNCS 7439 and 7440 comprises the proceedings of the 12th International Conference on Algorithms and Architectures for Parallel Processing ICA3PP 2012 as well as some workshop papers of the CDCN 2012 workshop which was held in conjunction with this conference The 40 regular paper and 26 short papers included in these proceedings were carefully reviewed and selected from 156 submissions The CDCN workshop attracted a total of 19 original submissions 8 of which are included in part II of these proceedings The papers cover many dimensions of parallel algorithms and architectures encompassing fundamental theoretical approaches practical experimental results and commercial components and systems Programming in Parallel with CUDA Richard Ansorge, 2022-06-02 CUDA is now the dominant language used for programming GPUs one of the most exciting hardware developments of recent decades With CUDA you can use a desktop PC for work that would have previously required a large cluster of PCs or access to a HPC facility As a result CUDA is increasingly important in scientific and technical computing across the whole STEM community from medical physics and financial modelling to big data applications and beyond This unique book on CUDA draws on the author s passion for and long experience of developing and using computers to acquire and analyse scientific data The result is an innovative text featuring a much richer set of examples than found in any other

comparable book on GPU computing Much attention has been paid to the C coding style which is compact elegant and efficient A code base of examples and supporting material is available online which readers can build on for their own projects

Advances in Nature-Inspired Computing and Applications Shishir Kumar Shandilya, Smita Shandilya, Atulya K. Nagar, 2018-08-29 This book contains research contributions from leading global scholars in nature inspired computing It includes comprehensive coverage of each respective topic while also highlighting recent and future trends The contributions provides readers with a snapshot of the state of the art in the field of nature inspired computing and its application This book has focus on the current researches while highlighting the empirical results along with theoretical concepts to provide a comprehensive reference for students researchers scholars professionals and practitioners in the field of Advanced Artificial Intelligence Nature Inspired Algorithms and Soft Computing
