Smart Computing Paradigms: Intelligence and Network Applications Vikrant Bhateja, Angela Lee Siew Hoong, Jude Dzevela Kong, Shabana Urooj, 2026-01-07 This book presents best selected papers presented at the 7th International Conference on Smart Computing and Informatics SCI 2025 held at the School of Engineering and Technology SET Sunway University Selangor Malaysia during 8 9 April 2025 It presents advanced and multidisciplinary research towards the design of smart computing and informatics The theme is on a broader front and focuses on various innovation paradigms in system knowledge intelligence and sustainability that may be applied to provide realistic solutions to varied problems in society environment and industries The scope is also extended towards the deployment of emerging computational and knowledge transfer approaches optimizing solutions in various disciplines of science technology and healthcare The work is published in four volumes **Tutorial Guide**, 1990 *The Seventh Generation of Hyperdimensional Quantum Computers (QG-VII)* SEYED RASOUL HAMZAH, 2026-02-02 The seventh generation of hyperdimensional quantum computers denoted as QG VII and encapsulated in the advanced computational architecture MODEL Net ZB56 represents a monumental shift from

traditional quantum computing paradigms towards an integrated manifold aware computational network It leverages the full predictive and structural framework of the Hamzah Equation uniting temporal fractal entanglement space embedding and non local consciousness based processing as computational primitives I Overview of QG VII MODEL Net ZB56 Net PsiNet Infinity refers to an infinitely scalable entangled information manifold embedded within multi phase quantum fields It operates through a ZB56 topological code which encodes 56 quantum braided states allowing non destructive read write operations on entangled qubit memory Hamzah Equation is used as the governing physical law across Net enabling adaptive quantum memory with temporal non local recall fracton stabilisation and cross manifold computation This leads to state prediction before observation bypassing classic quantum measurement limitations QG VII introduces hyperdimensional logic based not on binary gates or even quantum gates but on clustered phase transitions treating logic as a continuously evolving manifold rather than discrete operations
