small enough to be carried in a pocket or purse and often are designed to attach to the user's keychain. Some may store cryptographic keys such as a digital signature or biometric data such as a fingerprint minutiae. Some designs feature tamper-resistant packaging while others may include small keypads to allow entry of a PIN or a simple button to start a generating routine with some display capability to show a generated key number. Special designs include a USB connector, RFID functions or Bluetooth wireless interface to enable transfer of a generated key number sequence to a client system.
