Strengthening the Economic Analysis of Natural Resource Management Projects Keith Ward,2003 A review of a range of natural resources projects prepared during the 1990s by the Asian Development Bank ADB suggests that existing practices of economic analysis tend to capture only some of the impacts that such projects typically have Historically project analysis at ADB and elsewhere has tended to concentrate on identifying a monetized benefit in excess of 12 percent economic

internal rate of return EIRR from direct resource use impacts and simply identifying and describing nonquantifiable impacts. With the adoption of the ADB Environment Policy and the growing recognition that it is very often the poorest who suffer most from natural resource depletion and degradation a case is made that more analytic rigor in capturing as many as possible of the resource impacts of such projects is desirable. This report therefore suggests some specific techniques to strengthen the economic analysis of natural resources projects including improving the application of the benefits transfer method, defining the spatial boundaries of project economic analysis, establishing an appropriate accounting stance for the project, establishing the project's counterfactual i.e. without project situation and including the health impacts of such projects. The use of appropriate discount rates for sensitivity analysis and for investment decision making are discussed and guidance is given on presenting the results of a project analysis and summarizing the poverty reduction impact of natural resource management projects.
