- E) possessing a special adaptation that allows their cells to operate at an extraordinarily high salt concentration. - Answer-C) tolerating high urea concentrations that balance internal salt concentrations to seawater osmolarity.

The necropsy (postmortem analysis) of a freshwater fish that died after being placed accidentally in saltwater would likely show that

- A) loss of water by osmosis from cells in vital organs resulted in cell death and organ failure.
- B) high amounts of salt had diffused into the fish's cells, causing them to swell and lyse.
- C) the kidneys were not able to keep up with the water removal necessary in this hyperosmotic environment, creating an irrevocable loss of homeostasis.
- D) the gills became encrusted with salt, resulting in inadequate gas exchange and a resulting asphyxiation.
- E) brain cells lysed as a result of increased osmotic pressure in this hyperosmotic environment, leading to death by loss of autonomic function. - Answer-A) loss of water by osmosis from cells in vital organs resulted in cell death and organ failure.
