students of linear algebra hit a wall at mid semester Having spent the first part of the term doing mostly computational work  
they are unprepared for the rigors of conceptual thinking in an abstract setting that is frequently the focus of the second half  
of the course Holt s *Linear Algebra with Applications* blends computational and conceptual topics throughout Early treatment  
of conceptual topics in the context of Euclidean space gives students more time and a familiar setting in which to absorb  
them This organization also makes it possible to treat eigenvalues and eigenvectors earlier than in most texts Abstract vector  
spaces are introduced later once students have developed a solid conceptual foundation Concepts and topics are frequently  
accompanied by applications to provide context and motivation Because many students learn by example *Linear Algebra with*  
*Applications* provides a large number of representative examples over and above those used to introduce topics The text also  
has over 2500 exercises covering computational and conceptual topics over a range of difficulty levels     *Geometry*
