Modelling, Stability Analysis, and Control of a Buck Converter Moleykutty George, Jagadeesh Pasupuleti, 2024-09-18 A generalized approach in a systematic way is inevitable to oversee the challenges one may face in the product development stage to acquire the desired output performance under various operating conditions. This book, *Modelling Stability Analysis and Control of a Buck Converter*, Digital Simulation of Buck Regulator Systems in MATLAB, written and structured to cater to readers of different levels, aims to provide a clear understanding of different aspects of modelling and practical implementation. The operation of the semiconductor switches, switching characteristics of the energy storage elements, stability analysis, state space approach, transfer function modelling, mathematical modelling, and closed loop control of the buck converter, which are illustrated in this book, can be extended to any other similar system independent of complexity. This book covers modelling and control of buck converters and provides sufficient understanding to model and control complex systems. It discusses step response, pole-zero maps, Bode and root locus plots for stability analysis and design of the controller. It explains time response, frequency response, and stability analysis of the resistive-capacitive (RC), resistive-inductive (RL), and RL-C circuits to support the design of the buck converter. It includes simulation and experimental results to demonstrate the effectiveness of closed-loop buck regulator systems using proportional, P, integral, I, and PI controllers to achieve the desired output performance. It provides MATLAB codes, algorithms, and MATLAB PSB models to help readers with digital simulation. It is primarily written for senior undergraduate and graduate students, academic researchers, and specialists in the field of electrical and electronics engineering.

Geometric Science of Information Frank Nielsen, Frédéric Barbaresco, 2019-08-19 This book constitutes the proceedings of the 4th International Conference on Geometric Science of Information (GSI 2019) held in Toulouse, France, in August 2019. The 79 full papers presented in this volume were carefully reviewed and selected from 105 submissions. They cover all the main topics and highlights in the domain of geometric science of information, including information geometry, manifolds of structured data, information and their advanced applications.

Energy Pamela Fehrl, 2010 The conservation of energy and the development of alternative and renewable sources of energy are key concepts in the effort to go green. Power from coal, hydroelectric energy, nuclear energy, solar energy, and wind provide cleaner, more enduring energy sources than oil. Due to high interest in developing these alternatives, demand for skilled professionals is expected to grow in these fields in the coming years. This new resource explores 15 careers in the energy industry. Career profiles include Coal gasification engineers, Electrical engineers, Energy conservation technicians, Geotechnical engineers, Green vehicle designers, Hydroelectric engineers, Nuclear engineers, Petroleum engineers, Petroleum technicians, Renewable energy workers, Solar engineers, Wind power engineers, and more.

Semiconductor Basics George Domingo, 2020-09-08 An accessible guide to

how semiconductor electronics work and how they are manufactured for professionals and interested readers with no electronics engineering background Semiconductor Basics is an accessible guide to how semiconductors work It is written for readers without an electronic engineering background Semiconductors are the basis for almost all modern electronic devices The author an expert on the topic explores the fundamental concepts of what a semiconductor is the different types in use and how they are different from conductors and insulators The book has a large number of helpful and illustrative drawings photos and figures The author uses only simple arithmetic to help understand the device operation and applications The book reviews the key devices that can be constructed using semiconductor materials such as diodes and transistors and all the large electronic systems based on these two component such as computers memories LCDs and related technology like Lasers LEDs and infrared detectors The text also explores integrated circuits and explains how they are fabricated The author concludes with some projections about what can be expected in the future This important book Offers an accessible guide to semiconductors using qualitative explanations and analogies with minimal mathematics and equations Presents the material in a well structured and logical format Explores topics from device physics fundamentals to transistor formation and fabrication and the operation of the circuits to build electronic devices and systems Includes information on practical applications of p n junctions transistors and integrated circuits to link theory and practice Written for anyone interested in the technology working in semiconductor labs or in the semiconductor industry Semiconductor Basics offers clear explanations about how semiconductors work and its manufacturing process Electrical Engineering Allan R.
