Guide to Research Techniques in Neuroscience Matt Carter, Jennifer C. Shieh, 2009-09-25 Neuroscience is by definition a multidisciplinary field some scientists study genes and proteins at the molecular level while others study neural circuitry A single topic such as the auditory system can be studied using techniques from genetics imaging biochemistry or electrophysiology A young scientist must learn how to read the primary literature and then develop their own experiments This book offers that scientist an overview of mainstream research techniques provides guidelines on how to choose one technique over another offers tips on analyzing data and provides a list of references for additional detailed study This book can also assist an experienced scientist understand published studies conducted outside their own subfield Written by Stanford University graduate students in neuroscience to provide a hands on approach for other neuroscience graduate students Techniques within one field will be compared so that user can select best technique for their experiment Chapters include references key articles books protocols for additional detailed study Data Analysis boxes in each chapter help with data interpretation and offer guidelines on how best to represent results Walk through boxes guide students through the experiment step by step

Concepts in Bioinformatics and Genomics Jamil Momand, Alison McCurdy, 2017 Concepts in Bioinformatics and Genomics takes a conceptual approach balancing biology mathematics and programming while highlighting relevant real world applications and providing students with the tools to compute and analyze biological data Through many thought provoking exercises students will develop a deeper understanding of the molecular biology basic probability software programs and program coding methodology underpinning this exciting field

Not by Design John Reiss, 2009-08-10 More than two centuries ago William Paley introduced his famous metaphor of the universe as a watch made by the Creator For Paley the exquisite structure of the universe necessitated a designer Today some 150 years since Darwin's On the Origin of Species was published the argument of design is seeing a revival This provocative work tells how Darwin left the door open for this revival and at the same time argues for a new conceptual framework that avoids the problematic teleology inherent in Darwin's formulation of natural selection In a wide ranging discussion of the historical and philosophical dimensions of evolutionary theory from the ancient Greeks to today John Reiss argues that we should look to the principle of the conditions for existence first formulated before On the Origin of Species by the French paleontologist Georges Cuvier to clarify the relation of adaptation to evolution Reiss suggests that Cuvier's principle can help resolve persistent issues in evolutionary biology including the proper definition of natural selection the distinction between natural selection and genetic drift and the meaning of genetic load Moreover he shows how this principle can help unite diverse areas of biology ranging from quantitative genetics and the theory of the levels of selection to evo devo ecology physiology and conservation biology

Functional Polymers in Food Science Giuseppe Cirillo, Umile Gianfranco

Spizzirri, Francesca Iemma, 2015-03-09 Polymers are an important part in everyday life products made from polymers range from sophisticated articles such as biomaterials to aerospace materials One of the reasons for the great popularity exhibited by polymers is their ease of processing Polymer properties can be tailored to meet specific needs by varying the atomic composition of the repeat structure by varying molecular weight and by the incorporation via covalent and non covalent interactions of an enormous range of compounds to impart specific activities In food science the use of polymeric materials is widely explored from both an engineering and a nutraceutical point of view Regarding the engineering application researchers have discovered the most suitable materials for intelligent packaging which preserves the food quality and prolongs the shelf life of the products Furthermore in agriculture specific functionalized polymers are used to increase the efficiency of treatments and reduce the environmental pollution In the nutraceutical field because consumers are increasingly conscious of the relationship between diet and health the consumption of high quality foods has been growing continuously Different compounds e.g. high quality proteins lipids and polysaccharides are well known to contribute to the enhancement of human health by different mechanisms reducing the risk of cardiovascular disease coronary disease and hypertension This second volume focuses on the importance of polymers and functional food and in food processing
