Systems Engineering and Artificial Intelligence William F. Lawless, Ranjeev Mittu, Donald A. Sofge, Thomas Shortell, Thomas A. McDermott, 2021-11-02 This book provides a broad overview of the benefits from a Systems Engineering design philosophy in architecting complex systems composed of artificial intelligence AI machine learning ML and humans situated in chaotic environments The major topics include emergence verification and validation of systems using AI ML and human systems integration to develop robust and effective human machine teams where the machines may have varying degrees of autonomy due to the sophistication of their embedded AI ML The chapters not only describe what has been learned but also raise questions that must be answered to further advance the general Science of Autonomy The science of how humans and machines operate as a team requires insights from among others disciplines such as the social sciences national and international jurisprudence ethics and policy and sociology and psychology The social sciences inform how context is constructed how trust is affected when humans and machines depend upon each other and how human machine teams need

a shared language of explanation National and international jurisprudence determine legal responsibilities of non trivial human machine failures ethical standards shape global policy and sociology provides a basis for understanding team norms across cultures Insights from psychology may help us to understand the negative impact on humans if AI ML based machines begin to outperform their human teammates and consequently diminish their value or importance This book invites professionals and the curious alike to witness a new frontier open as the Science of Autonomy emerges

Computational Context William F. Lawless, Ranjeev Mittu, Donald Sofge, 2018-12-07 This volume addresses context from three comprehensive perspectives first its importance the issues surrounding context and its value in the laboratory and the

field second the theory guiding the AI used to model its context and third its applications in the field e.g. decision making This breadth poses a challenge The book analyzes how the environment context influences human perception cognition and action While current books approach context narrowly the major contribution of this book is to provide an in depth review over a broad range of topics for a computational context no matter its breadth The volume outlines numerous strategies and techniques from world class scientists who have adapted their research to solve different problems with AI in difficult environments and complex domains to address the many computational challenges posed by context Context can be clear uncertain or an illusion Clear contexts A father praising his child a trip to the post office to buy stamps a policewoman asking for identification Uncertain contexts A sneak attack a surprise witness in a courtroom a shout of Fire Fire Contexts as illusion Humans fall prey to illusions that machines do not Adelson's checkerboard illusion versus a photometer Determining context is not easy when disagreement exists interpretations vary or uncertainty reigns Physicists like Einstein relativity Bekenstein holographs and Rovelli universe have written that reality is not what we commonly believe Even outside of awareness individuals act differently whether alone or in teams Can computational context with AI adapt to clear and uncertain contexts to change over time and to individuals machines or robots as well as to teams If a program automatically knows the context that improves performance or decisions does it matter whether context is clear uncertain or illusory Written and edited by world class leaders from across the field of autonomous systems research this volume carefully considers the computational systems being constructed to determine context for individual agents or teams the challenges they face and the advances they expect for the science of context

Engineering Artificially Intelligent Systems William F. Lawless, James Llinas, Donald A. Sofge, Ranjeev Mittu, 2021-11-16 Many current AI and machine learning algorithms and data and information fusion processes attempt in software to estimate situations in our complex world of nested feedback loops Such algorithms and processes must gracefully and efficiently adapt to technical challenges such as data quality induced by these loops and interdependencies that vary in complexity space and time To realize effective and efficient designs of computational systems a Systems Engineering perspective may provide a framework for identifying the interrelationships and patterns of change between components rather than static snapshots We must study cascading interdependencies through this perspective to understand their behavior and to successfully adopt complex system of systems in society This book derives in part from the presentations given at the AAAI 2021 Spring Symposium session on Leveraging Systems Engineering to Realize Synergistic AI Machine Learning Capabilities Its 16 chapters offer an emphasis on pragmatic aspects and address topics in systems engineering AI machine learning and reasoning data and information fusion intelligent systems autonomous systems interdependence and teamwork human computer interaction trust and resilience
