Oxford Textbook of Cancer Biology Francesco Pezzella, Mahvash Tavassoli, David J. Kerr, 2019-05-06 The study of the biology of tumours has grown to become markedly interdisciplinary involving chemists statisticians epidemiologists mathematicians bioinformaticians and computer scientists alongside biologists geneticists and clinicians The Oxford Textbook of Cancer Biology brings together the most up to date developments from different branches of research into one coherent volume providing a comprehensive and current account of this rapidly evolving field Structured in eight sections the book starts with a review of the development and biology of multi cellular organisms how they maintain a healthy homeostasis in an individual and a description of the molecular basis of cancer development The book then illustrates as once cells become neoplastic their signalling network is altered and pathological behaviour follows It explores the changes that cancer cells can induce in nearby normal tissue the new relationship established between them and the stroma and the interaction between the immune system and tumour growth The authors illustrate the contribution provided by high throughput techniques to map cancer at different levels from genomic sequencing to cellular metabolic functions and how information technology with its vast amounts of data is integrated with traditional cell biology to provide a global view of the disease The effect of the different types of treatments on the biology of the neoplastic cells are explored to understand on the one side why some treatments succeed and on the other how they can affect the biology of resistant and recurrent disease The book concludes by summarizing what we know to date about cancer and in what direction our understanding of cancer is moving Edited by leading authorities in the field with an international team of contributors this book is an essential resource for scholars and professionals working in the wide variety of sub disciplines that make up today s cancer research and treatment community It is written not only for consultation but also for easy cover to cover reading

Waste Siege Sophia Stamatopoulou-Robbins, 2019-12-10 *Waste Siege* offers an analysis unusual in the study of Palestine it depicts the environmental infrastructural and aesthetic context in which Palestinians are obliged to forge their lives To speak of waste siege is to describe a series of conditions from smelling wastes to negotiating military infrastructures from biopolitical forms of colonial rule to experiences of governmental abandonment from obvious targets of resistance to confusion over responsibility for the burdensome objects of daily life Within this rubble debris and infrastructural fallout West Bank Palestinians create a life under settler colonial rule Sophia Stamatopoulou Robbins focuses on waste as an experience of everyday life that is continuous with but not a result only of occupation Tracing Palestinians own experiences of wastes over the past decade she considers how multiple authorities governing the West Bank including municipalities the Palestinian Authority international aid organizations NGOs and Israel rule by waste siege whether intentionally or not Her work challenges both common formulations of waste as matter out of place and as the ontological opposite of the environment by suggesting instead that waste siege be understood as an ecology of matter with no place to go Waste siege thus not only

describes a stateless Palestine but also becomes a metaphor for our besieged planet *A to Z of Chemists, Updated Edition* Elizabeth Oakes,2019-10-01 A to Z of Chemists Updated Edition tells the stories of nearly 100 chemists both well known scientific greats of history and contemporary scientists whose work is just verging on greatness Readers will find fascinating entries on people such as Gertrude Belle Elion who developed drugs to cure diseases as diverse as leukemia gout herpes malaria and arthritis From famous mainstream chemists to minority scientists often excluded from similar titles A to Z of Chemists Updated Edition spans all cultures ethnicities and eras Designed for high school through early college students this title in the Notable Scientists series is also an ideal resource for all readers interested in chemistry Articulated in everyday language even the most complex concepts are accessible While the majority of the scientists in this work are first and foremost chemists there is a handful of physicists biologists and other scientists who made significant contributions to chemistry People covered include Robert Wilhelm Bunsen 1811 1899 Louis Pasteur 1822 1895 George Washington Carver 1864 1943 St Elmo Brady 1884 1966 Karl Ziegler 1898 1973 Percy Lavon Julian 1899 1975 Linus Carl Pauling 1901 1994 Dorothy Crowfoot Hodgkin 1910 1994 Robert Burns Woodward 1917 1979 Sir George Porter 1920 2002 Sir Aaron Klug 1926 2018 Jean Pierre Sauvage 1944 present Aziz Sancar 1946 present Ahmed Zewail 1946 2016 Venkatraman Ramakrishnan 1952 present *Routledge Handbook of Feminist Peace Research* Tarja Väyrynen,Swati Parashar,Élise Féron,Catia Cecilia Confortini,2021-03-11 This handbook provides a comprehensive overview of feminist approaches to questions of violence justice and peace The volume argues that critical feminist thinking is necessary to analyse core peace and conflict issues and is fundamental to thinking about solutions to global problems and promoting peaceful conflict transformation Contributions to the volume consider questions at the intersection of feminism gender peace justice and violence through interdisciplinary perspectives The handbook engages with multiple feminisms diverse policy concerns and works with diverse theoretical and methodological contributions The volume covers the gendered nature of five major themes Methodologies and genealogies including theories concepts histories methodologies Politics power and violence including the ways in which violence is created maintained and reproduced and the gendered dynamics of its instantiations Institutional and societal interventions to promote peace including those by national regional and international organisations and civil society or informal groups Bodies sexualities and health including sexual health biopolitics sexual orientation Global inequalities including climate change aid global political economy This handbook will be of great interest to students of peace and conflict studies security studies feminist studies gender studies international relations and politics Chapter 9 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license **New Paradigms in Neuroscience and Related Targets for Drug Discovery** Salvatore Salomone,2020-07-02 *Journal of Experimental Biology* ,2005 *Quantitative Biology: Dynamics of Living Systems* Noriko Hiroi,Viji M. With the emergence of Systems Biology there is a greater realization that the whole behavior of a living system may not be simply described as the sum of its elements. To represent a living system using mathematical principles, practical quantities with units are required. Quantities are not only the bridge between mathematical description and biological observations; they often stand as essential elements similar to genome information in genetics. This important realization has greatly rejuvenated research in the area of Quantitative Biology. Because of the increased need for precise quantification, a new era of technological development has opened. For example, spatio-temporal high-resolution imaging enables us to track single-molecule behavior in vivo. Clever artificial control of experimental conditions and molecular structures has expanded the variety of quantities that can be directly measured. In addition, improved computational power and novel algorithms for analyzing theoretical models have made it possible to investigate complex biological phenomena. This research topic is organized on two aspects of technological advances which are the backbone of Quantitative Biology: i) visualization of biomolecules, their dynamics, and function; and ii) generic technologies of model optimization and numeric integration. We have also included articles highlighting the need for new quantitative approaches to solve some of the long-standing cell biology questions.

In the first section on visualizing biomolecules, four cutting-edge techniques are presented. Ichimura et al. provide a review of quantum dots, including their basic characteristics and their applications, for example, single-particle tracking. Horisawa discusses a quick and stable labeling technique using click chemistry with distinct advantages compared to fluorescent protein tags. The relatively small physical size, stability of covalent bond, and simple metabolic labeling procedures in living cells provide this type of technology a potential to allow long-term imaging with least interference to protein function. Obien et al. review strategies to control microelectrodes for detecting neuronal activity and discuss techniques for higher resolution and quality of recordings using monolithic integration with on-chip circuitry. Finally, the original research article by Amariei et al. describes the oscillatory behavior of metabolites in bacteria. They describe a new method to visualize the periodic dynamics of metabolites in large-scale cultures/populations. These four articles contribute to the development of quantitative methods visualizing diverse targets: proteins, electrical signals, and metabolites.

In the second section of the topic, we have included articles on the development of computational tools to fully harness the potential of quantitative measurements through either calculation based on a specific model or validation of the model itself. Kimura et al. introduce optimization procedures to search for parameters in a quantitative model that can reproduce experimental data. They present four examples: transcriptional regulation, bacterial chemotaxis, morphogenesis of tissues and organs, and cell cycle regulation. The original research article by Sumiyoshi et al. presents a general methodology to accelerate stochastic simulation efforts. They introduce a method to achieve 130 times faster computation of stochastic models by applying GPGPU. The strength of such accelerated numerical calculation are sometimes underestimated in biology; faster simulation enables multiple runs and in turn improved accuracy.

of numerical calculation which may change the final conclusion of modeling study This also highlights the need to carefully assess simulation results and estimations using computational tools **The Confines of Territory** John Agnew, 2020-12-17

The word territory has taken on renewed significance in a world where its close association with state sovereignty has made a serious comeback invoked alike by proponents of Brexit in the UK Making America Great Again in the USA and myriad populists from India to Brazil by way of Italy and Hungary The word has had a contentious history in social science and political theory In its first seven years the journal Territory Politics Governance has published numerous articles examining the ways in which territory figures into contemporary political debates and its limits as a concept when applied to a world in which sovereignty never has simply pooled up within self evidently distinctive blocs of space named as territories Among other things the limits of territory are apparent in terms of the history of a global capitalism that always bursts beyond established boundaries the fact that some states are much more powerful and exercise much more spatial reach than do others and that the political uses of territory in its current usage date back predominantly to seventeenth century Europe rather than being historically transcendental or worldwide The articles in this book are selected from Territory Politics Governance to survey many of the dilemmas and questions that haunt the concept of territory even as its current efflorescence in political discourse ignores them
