**Rice's Language of Buildings** Matthew Rice, 2019-05-14 A beautifully packaged

idiosyncratic introduction to British building styles by the acclaimed illustrator and architectural enthusiast Matthew Rice. *The Language of Buildings* covers the grammar and vocabulary of British buildings explaining the evolution of styles from Norman castles to Norman Gothic. Its aim is to enable the reader to recognize, understand and date any British building. As Matthew Rice says, "Once you can speak any language, conversation can begin, but without it, communications can only be brief and brutish." The same is the case with Architecture: an inability to describe the component parts of a building leaves one tongue-tied and unable to begin to discuss what is or is not exciting, dull or peculiar about it. *The Language of Buildings* will explain the language of architecture. With it in your hand, buildings will break down beguilingly into their component parts, ready for inspection and discussion. There will be no more references to that curly bit on top of the thing with the square protrusions. Ungainly and inept descriptions will be a thing of the past, and fluent in the world of volutes, hood moulds, lobed architraves and bucrania, you will be able to leave a cathedral or country house with as much to talk about as a film or play. *The Language of Buildings* starts with an explanation of the basic Grammar of buildings: elevation, plan, roof, gable and eave. This will enable the reader to better make use of what is to follow. It will also cover the Orders of Architecture: Doric, Tuscan, Ionic, Corinthian and Composite, so that the vital basics of Classicism are covered. Following this is the Vocabulary. This will be a chronological reference section covering period by period: the windows, doors and doorcases, columns, chimneys, arches, balustrades and pediments that make up the built environment. **Sweet's Architectural Catalog File**, 1911

*Understanding Building Stones and Stone Buildings* John A. Hudson, John W. Cosgrove, 2019-04-24. This book covers the wide spectrum of subjects relating to obtaining and using building stones, starting with their geological origin and then describing the nature of granites, volcanics, limestones, sandstones, flint, metamorphic stones, breccias and conglomerates, with emphasis being placed on how to recognise the different stones via the many illustrated examples from Great Britain and other countries. The life of a building stone is explained from its origin in the quarry through its exposure to the elements when used for a building to its eventual deterioration. The structure of stone buildings is then discussed with explanations of the mechanics of pillars, lighthouses and walls, arches, bridges, buttresses and roof vaults, plus castles and cathedrals. The sequence of the historical architectural styles of stone buildings is explained from the early days through to postmodern buildings. Special attention is paid to two famous architects: the Roman Vitruvius and the English Sir Christopher Wren, who designed and supervised the construction of St Paul's Cathedral in London. To demonstrate many of the concepts presented, two exemplary stone buildings are described in detail: the Albert Memorial in London and Durham Cathedral in northern England. The former building is interesting because it is comprised of a cornucopia of different building stones, and the latter building because of its architecture and sandstone decay mechanisms. In the final Chapter, ruined stone buildings are discussed: the many reasons for their decay and the possibility of their rebirth via digital recording of their geometry. The book has over 350 pages and is illustrated with more than 450 diagrams and colour photographs of both the various stones.

and the associated stone buildings Readers knowledge of the subject will be greatly enhanced by these images and the related explanatory text A wide ranging references and bibliography section is also included
