**Concise Epidemiologic Principles and Concepts** Laurens Holmes Jr., Franklin Opara, 2013-09-11 This textbook describes the basics of research in medical clinical and biomedical settings as well as the concepts and application of epidemiologic designs in research conduct Design transcends statistical techniques and no matter how sophisticated a statistical modeling errors of design sampling cannot be corrected The authors of this textbook have presented a complex field in a very simplified and reader friendly manner with the intent that such presentation will facilitate the understanding of design process and epidemiologic thinking in clinical and biomedical research Covers these relevant topics in epidemiology Case Cohort Design Prospective Case Control Quantitative Evidence Synthesis QES Instant Cohort Design Case Crossover Design Effect Modification Interaction Epidemiologic Tree Molecular Epidemiology Health Disparities Epidemiologic Challenge Big Data mHealth Social Media 3 Ts Team Science Transdisciplinary Research Translational Research Bias Random error Confounding Systems Science Evidence Discovery Research is presented as an exercise around measurement with measurement error inevitable in its conduct hence the inherent uncertainties of all findings in clinical and biomedical research *Concise Epidemiologic Principles and Concepts* covers research conceptualization namely research objectives questions hypothesis design implementation data collection analysis results and interpretation While the primary focus of epidemiology is to assess the relationship between exposure risk or predisposing factor and outcome disease or health related event causal association is presented in a simplified manner including the role of quantitative evidence synthesis meta analysis in causal inference Epidemiology has evolved over the past three decades resulting in several fields

**Legally Poisoned** Carl F. Cranor,2013-03-11 Take a random walk through your life and you ll find it is awash in industrial often toxic chemicals Sip water from a plastic bottle and ingest bisphenol A Prepare dinner in a non stick frying pan or wear a layer of Gore Tex only to be exposed to perfluorinated compounds Hang curtains clip your baby into a car seat watch television all are manufactured with brominated flame retardants Cosmetic ingredients industrial chemicals pesticides and other compounds enter our bodies and remain briefly or permanently Far too many suspected toxic hazards are unleashed every day that affect the development and function of our brain immune system reproductive organs or hormones But no public health law requires product testing of most chemical compounds before they enter the market If products are deemed dangerous toxicants must be forcibly reduced or removed but only after harm has been done In this scientifically rigorous legal analysis Carl Cranor argues that just as pharmaceuticals and pesticides cannot be sold without pre market testing other chemical products should be subject to the same safety measures Cranor shows in terrifying detail what risks we run and that it is entirely possible to design a less dangerous commercial world

*Analysis of Incidence Rates* Peter Cummings,2019-04-16 Incidence rates are counts divided by person time mortality rates are a well known example *Analysis of Incidence Rates* offers a detailed discussion of the practical aspects of analyzing incidence rates Important pitfalls and areas of controversy are discussed The text is aimed at graduate students researchers and analysts in the disciplines of epidemiology biostatistics social sciences economics and psychology Features Compares and contrasts incidence rates with risks odds and hazards Shows stratified methods including standardization inverse variance weighting and Mantel Haenszel methods Describes Poisson regression methods for adjusted rate ratios and rate differences Examines linear regression for rate differences with an emphasis on common problems Gives methods for correcting confidence intervals Illustrates problems related to collapsibility Explores extensions of count models for rates including negative binomial regression methods for clustered data and the analysis of longitudinal data Also reviews controversies and limitations Presents matched cohort methods in detail Gives marginal methods for converting adjusted rate ratios to rate differences and vice versa Demonstrates instrumental variable methods Compares Poisson regression with the Cox

proportional hazards model Also introduces Royston Parmar models All data and analyses are in online Stata files which readers can download Peter Cummings is Professor Emeritus Department of Epidemiology School of Public Health University of Washington Seattle WA His research was primarily in the field of injuries He used matched cohort methods to estimate how the use of seat belts and presence of airbags were related to death in a traffic crash He is author or co author of over 100 peer reviewed articles
