Generic and Indexed Programming Jeremy Gibbons,2012-07-20 Generic programming is about making programs more widely applicable via exotic kinds of parametrization not just along the dimensions of values or of types but also of things such as the shape of data algebraic structures strategies computational paradigms and so on Indexed programming is a lightweight form of dependently typed programming constraining flexibility by allowing one to state and check relationships between parameters that the shapes of two arguments agree that an encoded value matches some type that values transmitted along a channel conform to the stated protocol and so on The two forces of genericity and indexing balance each other nicely simultaneously promoting and controlling generality The 5 lectures included in this book stem from the Spring School on Generic and Indexed Programming held in Oxford UK in March 2010 as a closing activity of the generic and indexed programming project at Oxford which took place in the years 2006 2010 *Advances in Topology and Their Interdisciplinary Applications* Santanu Acharjee,2023-05-09 This book contains selected chapters on recent research in topology It bridges the gap between recent trends of topological theories and their applications in areas like social sciences natural sciences soft computing economics theoretical chemistry cryptography pattern recognitions and granular computing There are 14 chapters including two chapters on mathematical economics from the perspective of topology The book discusses topics on function spaces relator space preorder quasi uniformities bitopological dynamical systems b metric spaces and related fixed point theory This book is useful to researchers experts and scientists in studying the cutting edge research in topology and related areas and helps them applying topology in solving real life problems the society and science are facing these days **Linear Differential Equations and Function Spaces** ,2011-08-29 Linear Differential Equations and Function Spaces **On the Portability of Applications in Platform as a Service** Stefan Kolb,2019-02-21 *Numerical Methods for the Life Scientist* Heino Prinz,2011-08-06 Enzyme kinetics binding kinetics and pharmacological dose response curves are currently analyzed by a few standard methods Some of these like Michaelis Menten enzyme kinetics use plausible approximations others like Hill equations for dose response curves are outdated Calculating realistic reaction schemes requires numerical mathematical routines which usually are not covered in the curricula of life science This textbook will give a step by step introduction to numerical solutions of non linear and differential equations It will be accompanied with a set of programs to calculate any reaction scheme on any personal computer Typical examples from analytical biochemistry and pharmacology can be used as versatile templates When a reaction scheme is applied for data fitting the resulting parameters may not be unique Correlation of parameters will be discussed and simplification strategies will be offered Non-Hausdorff Topology and Domain Theory Jean Goubault-Larrecq,2013-03-28 This unique book on modern topology looks well beyond traditional treatises and explores spaces that may but need not be Hausdorff This is essential for domain theory the cornerstone of semantics of computer languages where the Scott topology is almost never
