Canals Of Amsterdam:

Amsterdam's Canal District Jan Nijman,2020-09-10 In terms of design scale and blending of ecological and aesthetic function Amsterdam's seventeenth century Canal District is a European marvel Its survival for four centuries is a testament to its ingenuity reflected in its designation as a UNESCO World Heritage Site in 2010 The Canal District today is an extraordinary example of resilient historic design and cultural heritage in a living city but it is not without present day challenges in recent years its urban ecology has become subject to severe pressures of global tourism and supergentrification This edited volume brings together seventeen reputable scholars to debate questions about the origins evolution and future of the Canal District With these differing approaches and perspectives on the Canal District the contributions render a collection where the whole is much more than the sum of the parts The book breaks new ground in our understanding of the District's historic design its evolution over four hundred years and the fundamental issues in future facing strategies and policies While the main focus is clearly on Amsterdam the discussions in this collection have an important bearing on broader questions of urban historic preservation elsewhere and on questions about enduring urban design

covering a wide range of political systems geography cultural backgrounds and population size The environmental impact of the selected cities is calculated using both ecological footprint and carbon emissions two of the most extensively available indices for measuring environmental impact The results are then considered in terms of political economic and social factors to ascertain the degree to which these factors are helping or hindering the reduction of the environmental impact of humans This book will be of great interest to students and scholars of sustainability urban planning urban design environmental sciences geography and sociology
