Frequently asked Interview Questions and Answers in Manual Testing *Selenium Interview Questions and Answers - English* Navneet Singh, Here are some commonly asked Selenium interview questions along with their answers. What is Selenium? Selenium is an open source automation testing tool used for automating web applications across different browsers and platforms. It provides a suite of tools for writing and executing automated tests in various programming languages like Java, Python, C, etc. What are the different components of Selenium? Selenium WebDriver, Selenium IDE, and Selenium Grid are the three main components of Selenium. Selenium WebDriver: It is a powerful API that allows you to interact with web elements and automate browser actions. Selenium IDE: It is a record and playback tool for creating quick tests in the Firefox browser. Selenium Grid: It is used for parallel test execution across multiple browsers and platforms. What programming languages are supported by Selenium WebDriver? Selenium WebDriver supports multiple programming languages including Java, Python, C, Ruby, and JavaScript. Node.js. What is the difference between findElement and findElements in Selenium WebDriver? findElement is used to locate the first element matching the specified locator strategy. If no element is found, it throws a NoSuchElementException. findElements is used to locate all elements matching the specified locator strategy. It returns a list of web elements or an empty list if no elements are found. What is a WebElement in Selenium? WebElement represents an HTML element on a web page. It provides methods for interacting with web elements such as clicking, typing, getting text, etc. Explain implicit wait and explicit wait in Selenium. Implicit Wait: Implicit wait instructs the WebDriver to wait for a certain amount of time before throwing an exception when attempting to locate an element. It is applied globally to all elements and waits for a fixed amount of time. Explicit Wait: Explicit wait is used to wait for a specific condition to occur before proceeding with the next steps in the test. It is applied to a specific element and waits until the condition is met or a timeout occurs. What is Page Object Model (POM) in Selenium? Page Object Model (POM) is a design pattern used in Selenium for creating an object-oriented representation of web pages and their elements. It separates the test logic from the page structure, making the tests more maintainable and reusable. What is TestNG? How is it used with Selenium? TestNG is a testing framework for Java that provides various features like annotations, assertions, test parameterization, and test grouping. It is commonly used with Selenium for organizing and executing test cases, generating test reports, and managing dependencies.

How do you handle dynamic elements in Selenium Dynamic elements are elements on a web page whose attributes or properties change dynamically Selenium provides techniques like implicit wait explicit wait and FluentWait to handle dynamic elements by waiting for the element to become available before performing actions on it What are the advantages of using Selenium for automation testing Some advantages of using Selenium for automation testing include Cross browser compatibility Selenium supports testing across different browsers like Chrome Firefox Safari etc Language support Selenium supports multiple programming languages allowing testers to use their preferred language for writing tests Open source Selenium is an open source tool meaning it is free to use and has a large community of developers contributing to its development and support Integration with other tools Selenium can be easily integrated with other testing frameworks build tools and continuous integration CI systems for seamless automation testing workflows These are some common Selenium interview questions that you may encounter during interviews Make sure to review the concepts thoroughly and practice writing Selenium test scripts to prepare effectively
