Inductive Biases in Machine Learning for Robotics and Control Michael Lutter, 2023-07-31 One important robotics problem is How can one program a robot to perform a task Classical robotics solves this problem by manually engineering modules for state estimation planning and control In contrast robot learning solely relies on black box models and data This book shows that these two approaches of classical engineering and black box machine learning are not mutually exclusive To solve tasks with robots one can transfer insights from classical robotics to deep networks and obtain better learning algorithms for robotics and control To highlight that incorporating existing knowledge as inductive biases in machine learning algorithms improves performance this book covers different approaches for learning dynamics models and learning robust control policies The presented algorithms leverage the knowledge of Newtonian Mechanics Lagrangian Mechanics as well as the Hamilton Jacobi Isaacs differential equation as inductive bias and are evaluated on physical robots

Vehicle Suspension Systems and Electromagnetic Dampers Saad Kashem, Romesh Nagarajah, Mehran Ektesabi, 2017-09-04
This book describes the development of a new analytical full vehicle model with nine degrees of freedom which uses the new modified skyhook strategy SKDT to control the full vehicle vibration problem The book addresses the incorporation of road bank angle to create a zero steady state torque requirement when designing the direct tilt control and the dynamic model of the full car model It also highlights the potential of the SKDT suspension system to improve cornering performance and paves the way for future work on the vehicle s integrated chassis control system Active tilting technology to improve vehicle cornering is the focus of

numerous ongoing research projects but these don't consider the effect of road bank angle in the control system design or in the dynamic model of the tilting standard passenger vehicles. The non-incorporation of road bank angle creates a non-zero steady state torque requirement.
