Made-to-Order Lean Greg Lane,2020-03-09 Toyota Production System methods have rendered remarkable results in high volume manufacturing plants but they have not been fully understood and correctly applied in high mix low volume environments While lean principles do apply the implementation methods and tools must be adapted and alternate methods embraced in a low volume environment This volume is specifically geared for manufacturers that have hundreds to thousands of active part numbers with few or no ongoing forecasted volumes and for job shops that build only to order The primary focus is eliminating non value added activities and instituting improvements on the most repetitive jobs a strategy that gives you more time to produce your low volume work or one offs About the author Greg Lane is a faculty member of the Lean Enterprise Institute and an advisor to the Instituto de Lean Management in Spain During his time with Toyota he was one of a handful of candidates selected for a one year training program conducted by the company s masters He became certified as a Toyota Production System TPS Key Person and continued his work with Toyota training others in TPS He has been highly active in working on implementing lean around the world supporting large and small companies alike In 1998 he began to focus his lean endeavors on meeting the specific needs of high mix low volume enterprises During his time as an independent consultant Greg purchased and operated his own manufacturing company which specialized in fast turnaround on high mix low volume parts Greg used TPS to grow the business and nearly double its sales Greg and his associates have experience not only at adapting the methods contained in this book but also in applying other tools that are too numerous to detail here They can be reached for further support with your lean transformation via email glane lowvolumelean com **Practical Druggist and Pharmaceutical Review of Reviews** ,1908 **The Charleston Advisor** ,2003 Lean Transportation Management Mohamed Achahchah,2018-09-17 This book provides an overview of the key transportation management processes from a shipper s perspective It enables managers to gain quick insight in the added value of transportation as a strategic differentiator its key drivers and guidelines on how to use them in an effective and efficient decision making process It explains how to identify and eliminate waste using basic Lean tools and proven concepts The reader is guided on how to start implementing the Lean methodology and best practices in the industry to realize significant savings Companies such as Adidas and Amazon are using transportation to increase sales by delivering purchased products faster than the competition These companies do not treat transportation as a cost center They are not focusing on reducing transportation spending They allow customers to buy any product that is available in any store or warehouse and have it delivered to their homes By delivering faster than the competition they increase sales At the same time they lower their total supply chain costs as faster deliveries lead to fewer returns Reduction of returns means higher sales and lower transportation costs for returns

The result is higher profits while creating more value for the customer Transportation is moving from a cost center towards a profit center The traditional logistics service providers are perceived to not innovate fast enough Top management must understand the transportation management basics and use it in their strategic decision making They should be involved in discussions on how to organize the transport management function in the best way and how to use it as a service differentiator Transportation is more than the efficient movement of supplies sub assemblies and final products In addition it is more than the key performance indicators on the business balanced scorecard Transportation management professionals fail to catch top management s attention due to the use of technical language It is more difficult to understand transportation key performance indicators such as loading degree net and gross pick up and delivery reliability It is easier to get top management attention when talking about lost sales due to stock outs lost tenders due to long delivery times high inventory holding and scrap costs
