

Dimensional Analysis Practice Worksheet Solutions

Complete this and place it in your portfolio after section 2-2. I will email the solutions later so that you can check your work (make sure you are showing the work the same way you see it in the solutions, using dimensional analysis). It is important that you practice and learn to use dimensional analysis (multiplying by unit fractions) appropriately. Make sure you get help if you are still having difficulties with this topic. Use my office hours or the math tutors in the Student Learning Center in the library. You do not have to write sentences on this practice worksheet. You do need to show all of the units and use \approx for approximations.

Do the following conversions using dimensional analysis using the conversion factors on page 74 of your text. You should be doing these all in one computation (even if you have to use more than one unit fraction), not several computations. I have done #1 as example.

1. 5400 inches to miles

$$5400 \cancel{\text{in.}} \times \frac{1 \cancel{\text{ft}}}{12 \cancel{\text{in.}}} \times \frac{1 \text{ mi}}{5280 \cancel{\text{ft}}} = \frac{5400}{63360} \text{ mi} \\ \approx 0.085 \text{ mi}$$

2. 13 weeks to seconds

$$13 \cancel{\text{ weeks}} \times \frac{7 \cancel{\text{ days}}}{1 \cancel{\text{ week}}} \times \frac{24 \cancel{\text{ hrs}}}{1 \cancel{\text{ day}}} \times \frac{60 \cancel{\text{ min}}}{1 \cancel{\text{ hr}}} \times \frac{60 \text{ sec}}{1 \cancel{\text{ min}}} = 7,862,400 \text{ sec}$$

3. 54 yards to mm

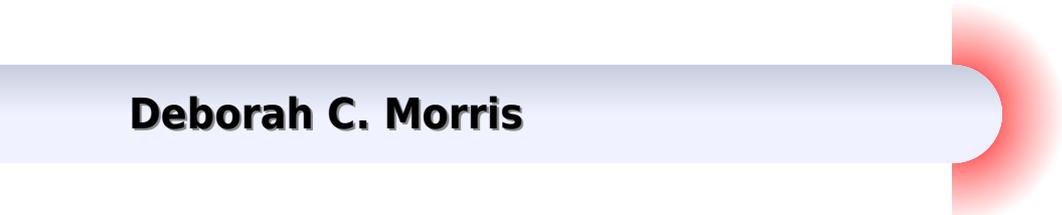

$$54 \cancel{\text{ yards}} \times \frac{3 \cancel{\text{ feet}}}{1 \cancel{\text{ yd}}} \times \frac{1 \cancel{\text{ m}}}{3.28 \cancel{\text{ ft}}} \times \frac{1000 \text{ mm}}{1 \cancel{\text{ m}}} = \frac{162000}{3.28} \text{ mm} \\ \approx 49,390.24 \text{ mm}$$

4. $36 \frac{\text{cm}}{\text{sec}}$ to mph

$$\frac{36 \cancel{\text{ cm}}}{1 \cancel{\text{ sec}}} \times \frac{60 \cancel{\text{ sec}}}{1 \text{ hr}} \times \frac{1 \cancel{\text{ m}}}{1000 \cancel{\text{ cm}}} \times \frac{3.28 \cancel{\text{ ft}}}{1 \cancel{\text{ m}}} \times \frac{1 \text{ mi}}{5280 \cancel{\text{ ft}}} = \frac{7084.8 \text{ mi}}{5280000 \text{ hr}} \\ \approx 0.00134 \frac{\text{mi}}{\text{hr}}$$

Heat and Mass Transfer: 7th Revised and Enlarged Edition R. Yadav, 2025-10-16 Heat and Mass Transfer is a comprehensive textbook that delves deep into the science of heat transfer that is the study of energy exchange between materials bodies due to temperature differences This foundational subject plays a critical role in a wide range of engineering and scientific disciplines including energy production refrigeration and air conditioning chemical and petrochemical processes electronic equipment design aerospace technology environmental

science manufacturing and food processing The book effectively bridges theoretical concepts with practical engineering applications making it an invaluable resource for students and professionals alike Beginning with an introduction to the fundamental modes of heat transfer conduction convection and radiation the book gradually explores more advanced topics These include general heat conduction equation one dimensional heat transfer both with and without heat generation multi dimensional conduction extended surfaces unsteady state heat transfer and dimensional analysis Additionally it covers external and internal flow convective heat transfer correlations free convection boiling condensation heat exchangers thermal radiation radiation exchange between surfaces and mass transfer ensuring a thorough understanding of the subject

Similitude and Approximation Theory Stephen Jay Kline,1986 There are a number of reasons for producing this edition of Similitude and Approximation Theory The methodologies developed remain important in many areas of technical work No other equivalent work has appeared in the two decades since the publication of the first edition The materials still provide an important increase in understanding for first year graduate students in engineering and for workers in research and development at an equivalent level In addition consulting experiences in a number of industries indicate that many technical workers in research and development lack knowledge of the methodologies given in this work This lack makes the work of planning and controlling computations and experiments less efficient in many cases It also implies that the coordinated grasp of the phenomena which is so critical to effective research and development work will be less than it might be The materials covered in this work focus on the relationship between mathematical models and the physical reality such models are intended v vi Preface to the Springer Edition to portray Understanding these relationships remains a key factor in simplifying and generalizing correlations predictions test programs and computations Moreover as many teachers of engineering know this kind of understanding is typically harder for students to develop than an understanding of either the mathematics or the physics alone
