Streaming Top Shows Science Experiments Review:

Watching the World Die Mike Bogue, 2023-10-26 During the 1980s popular fear of World War III spurred moviemakers to produce dozens of nuclear threat films. Categories ranged from monster movies to post apocalyptic adventures to realistic depictions of nuclear war and its immediate aftermath. Coverage of atomic angst films isn't new but this is the first book to solely analyze 1980s nuclear threat movies as a group. Entries range from classics such as *The Day After* and *WarGames* to obscurities such as *Desert Warrior* and *Massive Retaliation*. Chronological coverage of the 121 films released between 1980 and 1990 includes production details, chapter notes, and critical commentaries. [The Year's Best Science Fiction:](#)

[Twenty-Sixth Annual Collection](#) Gardner Dozois, 2009-06-23 The thirty stories in this collection imaginatively take us far across the universe into the very core of our beings to the realm of the gods and the moment just after now. Included here are the works of masters of the form and of bright new talents including Paolo Bacigalupi, Stephen Baxter, Elizabeth Bear, Aliette de Bodard, James L. Cambias, Greg Egan, Charles Coleman Finlay, James Alan Gardner, Dominic Green, Daryl Gregory, Gwyneth Jones, Ted Kosmatka, Mary Robinette Kowal, Nancy Kress, Jay Lake, Paul McAuley, Ian McDonald, Maureen McHugh, Sarah Monette, Garth Nix, Hannu Rajaniemi, Robert Reed, Alastair Reynolds, Mary Rosenblum, Kristine Kathryn Rusch, Geoff Ryman, Karl Schroeder, Gord Sellar, and Michael Swanwick. Supplementing the stories are the editor's insightful summation of the year's events and a lengthy list of honorable mentions, making this book both a valuable resource and the single best place in the universe to find stories that stir the imagination and the heart. [Communication](#) Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer, poorer, educated, less educated publics. The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind. This is taking place in a globalizing economy and society that further complicates the division between information haves and have-nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences. Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments. Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences. Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer-supported university-based research. Science communication often in new forms must expand to meet all these needs. Providing a comprehensive introduction to students, professionals, and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each. For this reason, science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered

exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics [The Year's Best Science Fiction](#) ,2009
