Macolm MacCallum (Jr), ILLINOIS UNIV URBANA., 1965 In this report a generalized approach is used in the development of describing functions for autonomous nonlinear sampled data NLS systems The principles and assumptions of describing function theory are examined and developed so that they are applicable to the nonlinear sampled data problem The direct application of Fourier analysis to the signals involved in the system is made possible by location of the nonlinear element in front of the sampler The basic assumption made is that the error signal entering the nonlinear element is a pure sinusoid

Ultra Low Power Bioelectronics Rahul Sarpeshkar, 2010-02-22 This book provides for the first time a broad and deep treatment of the fields of both ultra low power electronics and bioelectronics It discusses fundamental principles and circuits for ultra low power electronic design and their applications in biomedical systems It also discusses how ultra energy efficient cellular and neural systems in biology can inspire revolutionary low power architectures in mixed signal and RF electronics The book presents a unique unifying view of ultra low power analog and digital electronics and emphasizes the use of the ultra energy efficient subthreshold regime of transistor operation in both Chapters on batteries energy harvesting and the future of energy provide an understanding of fundamental relationships between energy use and energy generation at small scales and at large scales A wealth of insights and examples from brain implants cochlear implants bio molecular sensing
