Multiphysics Modelling of Fluid-Particulate Systems Hassan Khawaja,Mojtaba Moatamedi,2020-03-14 Multiphysics Modelling of Fluid Particulate Systems provides an explanation of how to model fluid particulate systems using Eulerian and Lagrangian methods The computational cost and relative merits of the different methods are compared with recommendations on where and how to apply them provided The science underlying the fluid particulate phenomena involves computational fluid dynamics for liquids and gases computational particle dynamics solids and mass and heat transfer In order to simulate these systems it is essential to model the interactions between phases and the fluids and particles themselves This book details instructions for several numerical methods of dealing with this complex problem This book is essential reading for researchers from all backgrounds interested in multiphase flows or fluid solid modeling as well as engineers working on related problems in chemical engineering food science process engineering geophysics or metallurgical processing Provides detailed coverage of Resolved and Unresolved Computational Fluid Dynamics Discrete Element Method CFD DEM Smoothed Particle Hydrodynamics and their various attributes Gives an excellent summary of a range of simulation techniques and provides numerical examples Starts with a broad introduction to fluid particulate systems to help readers from a range of disciplines grasp fundamental principles **Advances in Polymer Processing 2020** Christian Hopmann,Rainer Dahlmann,2020-03-10 This book gathers the proceedings of the International Symposium on Plastics Technology which was held on March 10 2020 in Aachen Germany and was organised by the Institute for Plastics Processing IKV in Industry and Craft at RWTH Aachen University Peer reviewed by an international scientific committee the conference proceedings comprise the papers presented by the international speakers Topics covered include circular economy extrusion lightweight technologies simulation and digitisation injection moulding hybrid materials and additive manufacturing In these fields key themes for plastics technologies have been identified that will shape the face of research and industry for the next decade In their contributions the authors present the latest scientific findings and discuss topical issues in plastics technologies The symposium offered an inspiring forum for the exchange on research and innovation for discussing urgent questions and providing impulses for the future of plastics technology Modelling Diesel Combustion P. A. Lakshminarayanan,Yogesh V. Aghav,2022-01-21 This book comprehensively discusses diesel combustion phenomena like ignition delay fuel air mixing rate of heat release and emissions of smoke particulate and nitric oxide It enables quantitative evaluation of these important phenomena and parameters Most importantly it attempts to model them with constants that are independent of engine types and hence they could be applied by the engineers and researchers for a general engine This book emphasizes the importance of the spray at the wall in precisely describing the heat release and emissions for most of the engines on and off road It gives models for heat release and emissions Every model is thoroughly validated by detailed experiments using a broad range of engines The book describes an elegant quasi one dimensional model for heat release in

diesel engines with single as well as multiple injections The book describes how the two aspects namely fuel injection rate and the diameter of the combustion bowl in the piston have enabled meeting advanced emission noise and performance standards The book also discusses the topics of computational fluid dynamics encompassing RANS and LES models of turbulence Given the contents this book will be useful for students researchers and professionals working in the area of vehicle engineering and engine technology This book will also be a good professional book for practising engineers in the field of combustion engines and automotive engineering   *Computational Fluid Dynamics for Wind Engineering* R.
