Rules on Digital Trade in the Light of World Trade Organization Agreements Asif Khan, 2023-12-14 Doctoral Thesis Dissertation from the year 2023 in the subject Business economics Trade and Distribution

language English abstract This doctoral dissertation deals with rules on digital trade in the light of WTO agreements Digital trade has brought about profound changes in the international trade framework Traditional trade which primarily involved the exchange of physical goods has now expanded to encompass a wide range of digitally delivered services online transactions and data flows This transformation has been driven by advancements in technology and the increasing interconnectedness of the global economy The digital economy encompasses various digital technologies and platforms and has become a significant driver of economic growth and innovation It allows businesses to reach international markets more quickly and efficiently transcending geographical barriers The internet mobile devices cloud computing and artificial intelligence have facilitated this digital transformation These technologies enable seamless communication data storage and processing automation and personalised services revolutionising how businesses operate and engage in international trade Digital trade has created new opportunities for businesses of all sizes Small and medium sized enterprises have benefited from the ability to access global markets through digital platforms and e commerce These platforms provide a means for Small and medium sized enterprises to connect with potential customers worldwide establish their presence and market their products and services without needing a physical presence in foreign markets This has lowered entry barriers and empowered Small and medium sized enterprises to participate in global value chains expanding their reach and contributing to economic growth One of the notable developments in the digital trade era is the rise of platform based businesses These platforms such as e commerce marketplaces ride sharing services and online payment systems act as intermediaries connecting buyers and sellers across borders They facilitate transactions provide infrastructure and services and enable businesses to expand their customer base globally Platforms have become influential players in international trade shaping market dynamics and redefining traditional trading system *The Wall Street Journal*, 2009 *The economic impact of FinTech companies on the traditional banking sector and possible future scenarios* Malik Dakdaki, 2017-11-07 Bachelor Thesis from the year 2017 in the subject Business economics Accounting and Taxes grade 1 3 University of applied sciences Frankfurt a M FOM language English abstract The beginning of the digital revolution at the turn of the millennium has ushered in a structural change in many sectors Due to the increased use of modern information and communication technologies ICT several sectors have already experienced existential economic implications This is especially evident in the music media and publishing industries For example music is not only purchased on CDs from local retail stores but is also increasingly consumed via the Internet through streaming services such as Spotify Videos store rentals compete with the comfortable video on demand services available in customers own homes The Internet as a medium for information and consumption for products and services has established itself as a faster more comfortable and more efficient channel in comparison to traditional sales channels Stationary retail stores were also not spared from digital disruption The market research institute Gesellschaft f r Konsumforschung GfK predicts a doubling of the online share of retail sales from currently

to 20% by the year 2025. At the same time, new and innovative market participants known as financial technology or FinTech companies are edging into the financial sector and trying to gain market share from established banks through customer-friendly products and services. Nevertheless, the banks do not seem to recognize the seriousness of the situation and therefore are reluctant to adapt to the new situation. However, experience has shown that ignorance of an industry's digitization has already led to the fall of large and established companies. As a well-known example in the technology industry, Kodak is often referred to in this context. The company's reaction to the digital disruption took place too late, whereas other companies had already recognized the trend towards digital photography at an earlier stage and prepared corresponding products. As a result, Kodak plummeted from the top of the photography technology industry. Evidence of ongoing digital disruption of the financial services sector has already been provided in the form of a new type of bank, the direct bank, which was first introduced in the early 1990s. FinTech companies seek to take advantage of this success and gain customers and market share by offering innovative solutions for financial products and services.

How do Fintech Startups and a Changing Consumer Behavior Reshape the Financial Services Industry? Viktor Kanzler, 2015-05-18 Bachelor Thesis from the year 2015 in the subject Business economics Business Management Corporate Governance grade 1.3 Frankfurt School of Finance Management language English abstract The purpose of this study is to illustrate how Fintech startups and other non-financial institutions reshape the finance industry as they take advantage of recent technology trends and lifestyle shifts affecting customers' expectations. The thesis aims to show how the competitive landscape changes and to what extent digital attackers grab parts of the value chain. The study also maps out the Fintech landscape, highlights important growth trends, and gives an overview of the services and products with which Fintech startups are currently edging into the market. Moreover, the study points out the specific drivers and barriers relevant to Fintech companies. A further objective was to find out whether Fintech startups pose a serious threat to traditional providers and, if so, which generic approaches exist to deal with these attackers. Apart from that, the aim was to identify how peers address digitization as well as what strengths traditional banks can rely on. Last but not least, the study demonstrates what banks and other institutions can learn from Fintech startups and how the future of finance could develop and look like in 2020.
