

# FITNESS WALKING TECHNIQUE

## General Posture:

Stand straight and tall, but relaxed. You should be able to draw a straight line from your ears down to your shoulders, hips, knees and ankles.

## Head:

Look forward with your head straight and your chin parallel to the ground. Avoid looking down. Instead, keep your eyes focused about 20 feet in front of you.

## Hands:

Avoid clenching your fists. Hold your hands naturally in a loosely closed position.

## Leg Action:

Step forward, placing one leg a natural distance in front of your body and planting your heel with your toes up at a 45-degree angle (off the ground). Your leg should be straight, but your knee shouldn't "lock." Roll your foot forward from heel to toe, shifting your body weight directly over your front foot before taking another step.

## Arms:

Engage your arms for a better workout. Bend them at a 90-degree angle and swing them as you walk, with your upper arms close to your sides. Your arm swing helps determine your pace – initiate a faster arm swing to naturally increase your step rate.

## Core:

Core engagement is key to maintaining proper posture. Engage your abs as if you were drawing your navel backward toward your spine. Check your low back – if it begins to curve, re-engage your core to bring your pelvis to a neutral position.

## Foot Placement:

Your feet should aim straight ahead and remain roughly hip-distance apart for each step.
