Engineering, Select Chapters from Electrical Engineering Principles and Applications by A.R. Hambley Hambley, *Smart Grid Security* Florian Skopik,Paul Dr. Smith,2015-08-11 The Smart Grid security ecosystem is complex and multi disciplinary and relatively under researched compared to the traditional information and network security

disciplines While the Smart Grid has provided increased efficiencies in monitoring power usage directing power supplies to serve peak power needs and improving efficiency of power delivery the Smart Grid has also opened the way for information security breaches and other types of security breaches Potential threats range from meter manipulation to directed high impact attacks on critical infrastructure that could bring down regional or national power grids It is essential that security measures are put in place to ensure that the Smart Grid does not succumb to these threats and to safeguard this critical infrastructure at all times Dr Florian Skopik is one of the leading researchers in Smart Grid security having organized and led research consortia and panel discussions in this field Smart Grid Security will provide the first truly holistic view of leading edge Smart Grid security research This book does not focus on vendor specific solutions instead providing a complete presentation of forward looking research in all areas of Smart Grid security The book will enable practitioners to learn about upcoming trends scientists to share new directions in research and government and industry decision makers to prepare for major strategic decisions regarding implementation of Smart Grid technology Presents the most current and leading edge research on Smart Grid security from a holistic standpoint featuring a panel of top experts in the field Includes coverage of risk management operational security and secure development of the Smart Grid Covers key technical topics including threat types and attack vectors threat case studies smart metering smart home e mobility smart buildings DERs demand response management distribution grid operators transmission grid operators virtual power plants resilient architectures communications protocols and encryption as well as physical security
