

Business Process Reengineering

BPR is the fundamental rethinking and radical redesign of business processes enabled by information technology to achieve dramatic improvements in business performance.

Four Important Rules for BPR Projects

1. Determine strategy before redesigning.
2. Redesign each primary process.
3. Optimize the use of information technology.
4. Organizational structure and governance models must be compatible with the primary process.

4. PROCESS DEPLOYMENT

Involves implementing the process improvement plan, obtaining customer feedback on the results, revising the plan as appropriate, and rolling out the solution across the organization.

- 4.1 Implement process improvement plan
- 4.2 Measure results
- 4.3 Obtain customer feedback on process performance
- 4.4 Do it all over again

3. PROCESS REDESIGN

Uses the data collected in Process Diagnosis to evaluate and develop plans to improve processes.

- 3.1 Benchmark the process
- 3.2 Develop solutions to close gaps
- 3.3 Get buy-in
- 3.4 Develop improvement plans

1. ORGANIZE FOR BPR

Involves creating business process map, identify areas for re-engineering, establish process ownership and initiate projects.

- 1.1 Create business process map
- 1.2 Prioritize areas for improvement
- 1.3 Establish process ownership
- 1.4 Form BPR team
- 1.5 Initiate project

2. PROCESS DIAGNOSIS

Involves determining requirements, mapping the processes, collecting process performance data, and rating processes based on these data.

- 2.1 Determine customer requirements
- 2.2 Determine and document current process
- 2.3 Rate the process

This textbook explores the fundamental principles of Business Process Reengineering BPR The express aim of the book is to address the needs of MBA students opting for courses in Information Technology Management or Operations Management MCA students who opt for Business Processes as an elective and students of BE B Tech Mechanical Engineering and Production Engineering for courses in Process Engineering Automation Management System Design The book provides them with the concepts methodologies models and tools needed to understand and implement BPR In a nutshell the book offers a step by step presentation of the practical framework and management techniques needed to achieve engineering solutions for implementation of BPR in an organization The initial chapters introduce the reader to the need for BPR and its utility in relation to IT and manufacturing The middle chapters cover the methodology success factors barriers and the technologies that are relevant for BPR implementation The latter chapters present solutions like lean and virtual manufacturing enterprise resource planning and functional information systems An exclusive chapter is devoted to concepts and tasks of software reengineering Aided by extensive illustrations end of chapter review questions as well as a chapter consisting entirely of case studies this book will help students develop a rich multifaceted perspective to enable them to handle complex management and engineering problems The book will be useful to students in practically all branches of engineering not just mechanical production industrial engineering

Business Process Engineering D. Jack Elzinga, Thomas R. Gullledge, Chung-Yee Lee, 1999-01-31 Due to growing concern about the competitiveness of industry in the international marketplace and the efficiency of government enterprises widespread initiatives are currently underway to enhance the competitive posture of firms and to streamline government operations Nearly all enterprises are engaged in assessing ways in which their productivity product quality and operations can be improved These efforts can be described as Business Process Engineering BPE BPE had its roots in industry under differing titles Process Improvement Process Simplification Process Innovation Reengineering etc It has matured to be an important ingredient of successful enterprises in the private and public sectors After extensive exploitation by industrial and governmental practitioners and consultants it is attracting increasing attention from academics in the fields of engineering and business However even with all of this attention in the popular literature serious scholarly

literature on BPE is in short supply. This is somewhat surprising especially since so many large international organizations have attempted BPE projects with varied success.

Towards a Unified Perspective of Business Process Reengineering Methodologies Neda Abdolvand, Zahra Ferdowsi, Amir Albadvi, 2021 Business Process Reengineering BPR has been introduced as an effective solution for improving radically the performance of organizations. It is recommended to consider a methodology in the BPR effort because of its risky and complicated nature. Although many researches present various methodologies, a comprehensive methodology has not been introduced. This research investigates almost 40 academic papers which focus on addressing a solution for BPR implementation. Then the various stages of the BPR project and the important factors are extracted. To form a comprehensive BPR methodology, factors are aggregated in six structural elements. The results propose a unified perspective and structure for BPR methodologies and hence increase the comprehensiveness and effectiveness. For more reliability, 23 solutions are investigated to explore their emphasis on each element.

Cases on Information Technology and Business Process Reengineering Mehdi Khosrowpour, 2006-01-01 This book presents a wide range of issues and challenges related to business process reengineering technologies and systems through the use of case studies. Provided by publisher.

Organizational Transformation Through Business Process Reengineering Vikram Sethi, William Richard King, 1998 For advanced courses in Management Information Systems. Organizational Transformation Through Business Process Reengineering deals with both successes and failures of business process reengineering, maintaining that no one management approach is a cure-all for organizational change. This book contains 36 readings and 8 cases and builds on the evidence gained in actual firms with various business processes using many different business process reengineering approaches. The information and knowledge currently available is much richer, more comprehensive and detailed than has been previously available.

Business Process Re-engineering B. C. Glasson, 1994 The focus of this publication is BPR. Business Process Re-engineering and the challenges and opportunities it brings to the field of information systems. The key to successful BPR from an information systems perspective is perceived to lie in integration. Papers included in the book accordingly consider the following three areas, both individually and in combination: Business Process Re-engineering, Information Systems Opportunities or Challenges, Information Systems Integration. Business Process Re-engineering is the restructuring of organizational processes through the innovative use of information systems and technology. IS/T. The aim is to refit or revamp an organization to survive today's economic downturn and to emerge refreshed and revitalized to meet its social obligations and accept its economic challenges into the next century. Information systems opportunities and challenges facing business process re-engineers revolve around integration. It is believed that unidimensional, specialized, segmented and piecemeal approaches have been adopted in IS/T which do not work. If IS/T is to achieve its full potential for social and economic good, there is little need for holistic, multi-dimensional, comprehensive approaches. IS/T researchers and practitioners should look to integrate their efforts with those of others in at least three ways:

Integrating theory and practice will encourage relevant research and more rapid technology transfer Integrating technical and social aspects will help alleviate those implementation issues that have bedevilled IS T for decades Integrating applications and subject matter will result in synergistic multi disciplinary approaches and solutions combining the interests of the many specialists involved in the field The broad ranging examination of these factors offered by the book highlights the overall need for information systems and technology integration if active responses to the opportunities and challenges presented by Business Process Re engineering are to be achieved
