*Fundamentals of Market Access for Pharmaceuticals* Eric Bouteiller, Annie Chicoye, 2024-11-05 Because at the heart of the apparent conflict between public health concerns and capitalistic interests, market access for pharmaceuticals is largely driven by political considerations, the difference with usual consumer goods being that pharmaceuticals are saving lives or years of life in good health. If pharmaceutical companies are to innovate, they must be incentivised with prices that reflect the value of their products and the resources and risks involved in their production. To ensure appropriate access to new drugs and treatments for patients in need around the world, affordability is key. How do we tackle this dilemma? This question is critical for all stakeholders. The development of universal health coverage puts pressure on governments to directly or indirectly control reimbursement and prices of pharmaceuticals, whereas the flow of innovations addressing infectious, chronic, and life-threatening diseases is growing constantly. This book summarizes various global approaches to solving this dilemma and explores new trends. Thanks to the toolbox proposed by the authors, not only students but also executives from companies, payers, regulators, and patients' organizations can benefit from the supporting concepts and methods that favour greater access to pharmaceuticals.

**WHO guideline on country pharmaceutical pricing policies**, 2020-09-29 In recent years high prices of pharmaceutical products have posed challenges in high and low income countries alike. In many instances high prices of pharmaceutical products have led to significant financial hardship for individuals and negatively impacted on healthcare systems ability to provide population wide access to essential medicines. Pharmaceutical pricing policies need to be carefully planned, carried out and regularly checked and revised according to changing conditions. Strong well thought out policies can guide well informed and balanced decisions to achieve affordable access to essential health products. This guideline replaces the 2015 WHO guideline on country pharmaceutical pricing policies revised to reflect the growing body of literature since the last evidence review in 2010. This update also recognizes country experiences in managing the prices of pharmaceutical products.

**The Price of Global Health** Ed Schoonveld, 2020-05-17 The Price of Global Health is a unique book that describes the pharmaceutical pricing process and its business, economic and social challenges. Global drug pricing is one of the most hotly debated yet least understood aspects of the pharmaceutical industry. How should drug prices be set and what does it mean for patients? Why do governments increasingly get involved and what is its impact on the global competitive environment? How can a life saving industry have a poorer image than gun and tobacco industries whose products are associated with death? The pharmaceutical industry is under unprecedented pressure due to a combination of declining R D productivity, payer/provider demands for better value and public pressures to show pricing restraint. Rapidly increasing cost of healthcare shifts from fee for service to value based reimbursement. Public pressure on drug pricing and an increasingly vocal medical community have empowered public and private payers worldwide to be more demanding on evidence of value for the prescription drugs that are brought to market. Pharmaceutical companies have often failed to deliver evidence of patient value as development decision making is overly focused on speed to FDA approval rather than speed to commercial success by effectively addressing the many Access Journey obstacles that typify today's much changed pharmaceutical environment. This 3rd edition is significantly expanded with ten new chapters and revised and updated throughout to reflect today's environment. The contents are reorganized to directly address critical pricing and patient access issues. Ed Schoonveld explains how pharmaceutical prices are determined in a complex global payer environment and what factors influence the process. His insights will help a wide range of audiences from healthcare industry professionals to policy makers, consumers, pharmaceutical company leaders and access and pricing professionals to gain a better understanding of this highly complex and emotionally charged field.
