Proceedings of the 7th International Conference on Modelling and Simulation in Civil Engineering 2024, Volume II Amal Azad Sahib, Swagata Banerjee Basu, Albert Thomas, Munavar Fairouz Cheranchery, 2026-01-01 This book offers a comprehensive exploration of the critical issues surrounding SDGs 9 11 and 12 delving into the multifaceted challenges and innovative solutions that define these vital fields Civil engineering plays a pivotal role in achieving sustainable development goals SDGs by providing the foundational infrastructure necessary for sustainable development across various sectors From designing resilient transportation systems to constructing eco friendly buildings civil engineers are at the forefront of creating solutions that promote economic growth social equity and environmental sustainability One of the primary goals of civil engineering in the context of sustainable development is to ensure access to safe and reliable infrastructure for all which aligns with SDG 9 Industry Innovation and Infrastructure This involves designing and constructing roads bridges railways airports and ports that not only facilitate economic activities but also minimize environmental impact and enhance social inclusivity For instance civil engineers are increasingly incorporating green infrastructure techniques such as permeable pavements green roofs and rain gardens to manage stormwater runoff mitigate urban heat island effects and improve air quality in urban areas contributing to SDG 11 Sustainable Cities and Communities Moreover civil engineers play a crucial role in addressing global challenges such as climate change and resource depletion which are central to several SDGs By integrating principles of sustainability into their designs and practices civil engineers contribute to SDG 12 Responsible Consumption and Production This includes implementing renewable energy systems and promoting circular economy sustainable materials and construction techniques recycled materials waste to resource techniques lean construction etc to reduce carbon emissions and minimize resource consumption throughout the life cycle of infrastructure projects

Flat Plate Voided Slabs Hunter Wheeler, 2018 In structural engineering it can be challenging to incorporate a sustainable design without sacrificing structural integrity However flat plate voided slabs are an interesting alternative to standard flat plate concrete slab systems due to the reduction in concrete and the recycled plastic void formers that are located inside the slab This research is necessary because an increased use of voided slabs in concrete structures would help fight climate change by reducing the CO₂ emissions caused from cement production This report will discuss the advantages and disadvantages of implementing plastic

void formers into solid flat plate slabs and examine a parametric study comparing voided flat plate slabs to solid flat plate slabs. The design of the voided slabs follows the CRSI Design Guide for Voided Concrete Slabs while also referencing the ACI 318-14 Building Code Requirements for Structural Concrete. Three different slabs for typical square bay sizes of 25 feet, 30 feet, and 35 feet are designed to compare the effectiveness of voided slabs to traditional solid slabs.
