Cousins,Carin Louise Roberts-Wollmann,Michael Carey Brown,2013 TRB s National Cooperative Highway Research Program NCHRP Report 733 High Performance High Strength Lightweight Concrete for Bridge Girders and Decks presents proposed changes to the American Association of State Highway and Transportation Officials Load and Resistance Factor Design LRFD bridge design and construction specifications to address the use of lightweight concrete in bridge girders and decks The proposed specifications are designed to help highway agencies evaluate between comparable designs of lightweight and normal weight concrete bridge elements so that an agency s ultimate selection will yield the greatest economic benefit The attachments contained in the research agency s final report provide elaborations and detail on several aspects of the research Attachments A and B provide proposed changes to AASHTO LRFD bridge design and bridge construction specifications respectively these are included in the print and PDF version of the report Attachments C through R are available for download below Attachments C D and E contain a detailed literature review survey results and a literature summary and the approved work plan respectively Attachment C Attachment D Attachment E Attachments F through M provide details of the experimental program that were not able to be included in the body of this report Attachment F Attachment G Attachment H Attachment I Attachment J Attachment K Attachment L Attachment M Attachments N through Q present design examples of bridges containing lightweight concrete and details of the parametric study Attachment N Attachment O Attachment P Attachment Q Attachment R is a detailed reference list Publication information *Allowable Compression Limits in Prestressed Concrete Members* Maher K. Tadros,Panya Noppakunwijai,2002 **Redistribution of Stresses in Segmentally Erected Prestressed Concrete Bridges** M. A. Ketchum,1986 **A Precast Substructure Design for Standard Bridge Systems** Sarah Longstreth Billington,Robert W. Barnes,John Edward Breen,1999 The proposed substructure system described in this report has been developed to improve the aesthetics and reduce the construction time of the support structures for standard bridges The form of the proposed substructures is highly attractive and is a distinct improvement over many traditional short and medium span bridge substructures The substructure system developed is particularly well suited for precasting although the geometric form could be cast in situ Precasting would result in the increased use of high performance concrete in the substructures The use of such concrete will bring improved durability since the high performance concrete is greatly resistant to ingress of moisture and chlorides In addition the greater compressive strength of the high performance concretes is utilized for reducing the handling weight and dead load of the

substructure units The bent cap units are more complex than traditional cast in place bent caps but appear feasible for plant production or large scale cast on site projects
