An exploratory requirements analysis for a customer journey modelling and analysis tool** Marie Klose,2019-03-01 Master s Thesis from the year 2018 in the subject Business economics Offline Marketing and Online Marketing grade 1 7 language English abstract The customer journey is a central topic for all retailers to consider to be able to successfully manage customer experience and to thereby ensure the survival of a business Hence managing and influencing customer journeys has been of importance since the emergence of retailing However to successfully manage customer journeys has become increasingly complex with the development of omnichannel retail Classical techniques to analyze and influence customer journeys are insufficient for today s customers who are seamlessly using multiple devices and switching between different channels during their purchase journey while expecting a uniform and personalized customer experience This research paper studies the topic of customer journey analysis in omnichannel retail and discusses which requirements need to be fulfilled to successfully model analyze and influence the respective customer journeys By conducting a systematic literature review it was proven that a tool is needed to model and analyze individual customer journeys in omnichannel retail in real time making use of online and offline customer data Through the method of semi structured interviews requirements that are related to developing and deploying such a tool were collected in an exploratory way This is from scientific importance as until now few research has addressed the topic of ways to model and analyze customer journeys in omnichannel retail Additionally with rising customer expectations and an increased competition between retailers the importance of successfully managing customer journeys is indispensable in retailing The findings of this paper imply a high probability of an increasing need to deploy a customer journey modelling and analysis tool by omnichannel retailers However

further in depth analysis and specification of characteristics that this tool requires to fulfill are needed to successfully develop it Novel Design and Information Technology Applications for Civil and Structural Engineering B. Kumar, B. H. V. Topping, 1999 Contains a selection of papers presented at The Fifth International Conference on the Applications of Artificial Intelligence to Civil and Structural Engineering held from 13-15 September 1999 at Oxford England *Cases on Information Technology Planning, Design and Implementation* Mehdi Khosrow-Pour, 2006 This book brings together a variety of real life experiences showing how companies and organizations have successfully or not so successfully planned, designed and implemented different applications using information technology Provided by publisher *Journal of Mechanical Design*, 2007-07 **Validation of Measures Designed to Maximize 21st-century Army NCO Performance** Deirdre J. Knapp, 2004 The NCO21 research program was undertaken to help the U S Army plan for the impact of future demands on the noncommissioned officer (NCO) corps. The performance requirements and associated knowledges, skills and aptitudes (KSAs) expected of future successful NCOs were used as a basis for developing tools that could be incorporated into an NCO performance management system geared to 21st century job demands. This report documents the concurrent criterion related validation of the predictor measures. The predictor measures include the Armed Services Vocational Aptitude Battery (ASVAB), Assessment of Individual Motivation (AIM) and Biographical Information Questionnaire (BIQ) which are already used in the Army for other purposes. A written Situational Judgment Test (SJT), the Experience and Activities Record (ExAct), Personnel File Form (PFF21) and a semi structured interview were developed for this project. Two types of rating scale instruments were developed for gathering criterion data. The Observed Performance Rating Scales ask supervisors to rate how well Soldiers perform in their current jobs and the Expected Future Performance Rating Scales have them predict how their Soldiers would perform in future conditions. All of the predictors yielded one or more scores that were significantly correlated with the performance ratings. The SJT interview and some scores from the AIM and BIQ showed the most incremental validity over the current system. In this concurrent validation the predictors were more highly correlated with performance at the E5 level compared to the E6 level. DTIC
