Joseph,Abhiram Vijayan,2017-05-29 Scientific Study from the year 2017 in the subject Computer Science Applied grade 1 5 Mar Augusthinose College language English abstract Provable data possession PDP is a technique for ensuring the integrity of data in storage outsourcing In this scheme we address the construction of an efficient PDP scheme for distributed cloud storage to support the scalability of service and data migration in which we consider the existence of multiple cloud service providers to cooperatively store and maintain the clients data We present a cooperative PDP CPDP scheme based on homomorphic verifiable response and hash index hierarchy We prove the security of our scheme based on multi prover zero knowledge proof system which can satisfy completeness knowledge soundness and zero knowledge properties In addition we articulate performance optimization mechanisms for our scheme and in particular present an efficient method for selecting optimal parameter values to minimize the computation costs of clients and storage service providers Our experiments show that our solution introduces lower computation and communication overheads in comparison with non cooperative approaches Using MR PDP to store treplicas is computationally much more efficient than using a single replica PDP scheme to store t separate unrelated files e g by encrypting each file separately prior to storing it Another advantage of MR PDP is that it can generate further replicas on demand at little expense when some of the existing replicas fail The generation of replicas is on demand by the user s request that is based on the security choice selected by the user at the time of file upload The user can choose three options Low Medium High at the time of file upload The uploaded file is divided in to N blocks of different sizes to achieve the efficiency

in storage and is also used to improve security here N represent the number of clouds we are using Low means the file is divided into N blocks here 3 and each block is stored in N different location of the single cloud Medium means the file is divided into N blocks and each block is stored in N different clouds which improves the security of data but reduce the availability High means the file is divided into N blocks and each N block is stored in N different clouds that are we are keeping the replicas of file in N different clouds The system maintains a download count to dynamically create the replicas in accordance with the users demand
