

## Exercises - Graph Theory SOLUTIONS

### Question 1

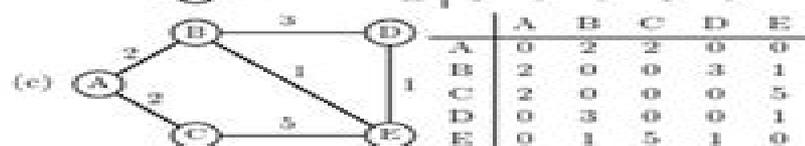

Model the following situations as (possibly weighted, possibly directed) graphs. Draw each graph, and give the corresponding adjacency matrices.

- Ada and Bertrand are friends. Ada is also friends with Cecilia and David. Bertrand, Cecilia and Évariste are all friends of each other.
- Wikipedia has five particularly interesting articles: Animal, Burrow, Chile, Desert, and Elephant. Some of them even link to each other!
- It is well-known that in the Netherlands, there is a 2-lane highway from Amsterdam to Breda, another 2-lane highway from Amsterdam to Cappelé aan den IJssel, a 3-lane highway from Breda to Dordrecht, a 1-lane road from Breda to Ede and another one from Dordrecht to Ede, and a 5-lane superhighway from Cappelé aan den IJssel to Ede.

### Solution

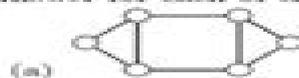

- (b) Checking Wikipedia, we find that the Animal article links to none of the others, the Burrow article links to Animal and Chile, the Chile article links to Desert, the Desert article links to Chile, and the Elephant article links to Animal and Desert. Strangely, no relation between Burrow and Elephant seems to be present. We encode this information with a directed graph.

### Question 2

Answer for each of these graphs: Is it planar? Is it bipartite?

*Matroid Theory and its Applications in Electric Network Theory and in Statics* Andras Recski, 2013-06-29 I The topics of this book The concept of a matroid has been known for more than five decades Whitney 1935 introduced it as a common generalization of graphs and matrices In the last two decades it has become clear how important the concept is for the following reasons 1 Combinatorics or discrete mathematics was considered by many to be a collection of interesting sometimes deep but mostly unrelated ideas However like other branches of mathematics combinatorics also encompasses some general tools that can be learned and then applied to various problems Matroid theory is one of these tools 2 Within combinatorics the relative importance of algorithms has increased with the spread of computers Classical analysis did not even consider problems where only a finite number of cases were to be studied Now such problems are not only considered but their complexity is often analyzed in considerable detail Some questions of this type for example the determination of when the so called greedy algorithm is optimal cannot even be answered without matroidal tools
