Artificial Intelligence in

Finance Yves Hilpisch, 2020-10-14 The widespread adoption of AI and machine learning is revolutionizing many industries today. Once these technologies are combined with the programmatic availability of historical and real-time financial data, the financial industry will also change fundamentally. With this practical book, you'll learn how to use AI and machine learning to discover statistical inefficiencies in financial markets and exploit them through algorithmic trading. Author Yves Hilpisch shows practitioners, students, and academics in both finance and data science practical ways to apply machine learning and deep learning algorithms to finance. Thanks to lots of self-contained Python examples, you'll be able to replicate all results and figures presented in the book. In five parts, this guide helps you learn central notions and algorithms from AI, including recent breakthroughs on the way to artificial general intelligence (AGI) and superintelligence (SI). Understand why data-driven finance, AI, and machine learning will have a lasting impact on financial theory and practice. Apply neural networks and reinforcement learning to discover statistical inefficiencies in financial markets. Identify and exploit economic inefficiencies through backtesting and algorithmic trading, the automated execution of trading strategies. Understand how AI will influence the competitive dynamics in the financial industry and what the potential emergence of a financial singularity might bring about.

Practical C# and WPF For Financial Markets Jack Xu, 2016-12-05 *Practical C and WPF for Financial Markets* provides a complete explanation of .NET programming in quantitative finance. It demonstrates how to implement quantitative models and back-test trading strategies. It pays special attention to creating business applications and reusable C# libraries that can be directly used to solve real-world problems in quantitative finance. The book contains: Overview of C# WPF programming, data binding, and MVVM pattern, which is necessary to create MVVM-compatible .NET financial applications. Step-by-step approaches to create a variety of MVVM-compatible 2D/3D charts, stock charts, and technical indicators using my own chart package and Microsoft chart control. Introduction to free market data retrieval from online data sources using .NET interfaces. These data include EOD, real-time, intraday, interest rate, foreign exchange rate, and option chain data. Detailed procedures to price equity options and fixed income instruments, including European, American, Barrier options, bonds, and CDS, as well as discussions on related topics such as cash flows, term structures, yield curves, discount factors, and zero-coupon bonds. Introduction to linear analysis, time series analysis, and machine learning in finance, which covers linear regression, PCA, SVM, and neural networks. In-depth descriptions of trading strategy development and back-testing, including strategies for single stock trading, stock pairs trading, and trading for multi-asset portfolios.
