Python For Computational Science And Engineering:

Python Scripting for Computational Science Hans Petter Langtangen,2007-12-05 Numerous readers of the second edition have notified me about misprints and possible improvements of the text and the associated computer codes The resulting modifications have been incorporated in this new edition and its accompanying software The major change between the second and third editions however is caused by the new implementation of Numerical Python now called numpy The new numpy package encourages a slightly different syntax compared to the old Numeric implementation which was used in the previous editions Since Numerical Python functionality appears in a lot of places in the book there are hence a huge number of updates to the new suggested numpy syntax especially in Chapters 4 9 and 10 The second edition was based on Python version 2 3 while the third edition contains updates for version 2 5 Recent Python features such as generator expressions Chapter 8 9 4 Ctypes for interfacing shared libraries in C Chapter 5 2 2 the with statement Chapter 3 1 4 and the subprocess module for running external processes Chapter 3 1 3 have been exemplified to make the reader aware of new tools Chapter 4 4 4 is new and gives a taste of symbolic mathematics in Python
