Exact Analytical Solution to a Transient Conjugate Heat-transfer Problem James Sucec,1973 An exact analytical solution is found for laminar constant property slug flow over a thin plate which is also convectively cooled from below The solution is found by means of two successive Laplace transformations when a transient in the plate and the fluid is initiated by a step change in the fluid inlet temperature The exact solution yields the transient fluid temperature surface heat flux and surface temperature distributions The results of the exact transient solution for the surface heat flux are compared to the quasi steady values and a criterion for the validity of the quasi steady results is found Also the effect of the plate coupling parameter on the surface heat flux are investigated
