

Prove, from **first principles**, that the derivative of  $3x^2 - 5x$  is  $6x - 5$

$$f'(x) = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h}$$

$$f(x) = ax^n \implies f'(x) = nax^{n-1}$$

Dynamic Meteorology: Data Assimilation Methods L. Bengtsson,M. Ghil,E. Källén,2012-12-06 One of the main reasons we cannot tell what the weather will be tomorrow is that we do not know accurately enough what the weather is today Mathematically speaking numerical weather prediction NWP is an initial value problem for a system of nonlinear partial differential equations in which the necessary initial values are known only incompletely and inaccurately Data at the initial time of a numerical forecast can be supplemented however by observations of the atmosphere over a time interval preceding it New observing systems in particular polar orbiting and geostationary satellites which are providing observations continuously in time make it absolutely necessary to find new and more satisfactory methods of assimilating meteorological observations for the dual purpose of defining atmospheric states and of issuing forecasts from the states thus defined FUNDamental progress in this area has been made in recent years and this book attempts to give a review and some suggestions for further improvements in the field of meteorological data assimilation methods The European Centre for Medium Range Weather Forecasts ECMWF every year organises seminars for the benefit of meteorologists and geophysicists of the ECMWF Member states The 1980 Seminar was devoted to data assimilation methods and this book contains selected lectures from that seminar The purpose of the seminar was twofold it was intended to give a basic introduction to the subject as well as an overview of the latest developments in the field
