*Basic Complex Analysis* Jerrold E. Marsden, Michael J. Hoffman, 1999 *Basic Complex Analysis* skillfully combines a clear exposition of core theory with a rich variety of applications Designed for undergraduates in mathematics the physical sciences and engineering who have completed two years of calculus and are taking complex analysis for the first time

**Basic Complex Analysis +student Guide** Jerrold E. Marsden, Michael J. Hoffman, 2000-12-14     **Solutions and Answer Manual for Basic Complex Analysis** Michael J. Hoffman, Jerrold E. Marsden, 1973     *Fourier Methods in Imaging* Roger L. Easton Jr., 2010-11-18 *Fourier Methods in Imaging* introduces the mathematical tools for modeling linear imaging systems to predict the action of the system or for solving for the input The chapters are grouped into five sections the first introduces the imaging tasks direct inverse and system analysis the basic concepts of linear algebra for vectors and functions including complex valued vectors and inner products of vectors and functions The second section defines special functions mathematical operations and transformations that are useful for describing imaging systems Among these are the Fourier transforms of 1 D and 2 D function and the Hankel and Radon transforms This section also considers approximations of the Fourier transform The third and fourth sections examine the discrete Fourier transform and the description of imaging systems as linear filters including the inverse matched Wiener and Wiener Helstrom filters The final section examines applications of linear system models to optical imaging systems including holography Provides a unified mathematical description of imaging systems Develops a consistent mathematical formalism for characterizing imaging systems Helps the reader develop an intuitive grasp of the most common mathematical methods useful for describing the action of general linear systems on signals of one or more spatial dimensions Offers parallel descriptions of continuous and discrete cases Includes many graphical and pictorial examples to illustrate the concepts This book helps students develop an understanding of mathematical tools for describing general one and two dimensional linear imaging systems and will also serve as a reference for engineers and scientists     **Lecture Notes on Complex Analysis** Ivan Francis Wilde, 2006 This book is based on lectures presented over many years to second and third year mathematics students in the Mathematics Departments at Bedford College London and King s College London as part of the BSc and MSci program Its aim is to provide a gentle yet rigorous first course on complex analysis Metric space aspects of the complex plane are discussed in detail making this text an excellent introduction to metric space theory The complex exponential and trigonometric functions are defined from first principles and great care is taken to derive their familiar properties In particular the appearance of  $i$  in this context is carefully explained The central results of the subject such as Cauchy s Theorem and its immediate corollaries as well as the theory of singularities and the Residue Theorem are carefully treated while avoiding overly complicated generality Throughout the theory is illustrated by examples A number of relevant results from real analysis are collected complete with proofs in an appendix The approach in this book attempts to soften the impact for the student who may feel less than

completely comfortable with the logical but often overly concise presentation of mathematical analysis elsewhere Basic Complex Analysis Student Guide Jerrold E. Marsden, Michael J.
