Architecture's Model Environments Lisa Moffitt,2023-02-20 Seen through the distilling lens of the architectural model Architecture s Model Environments is a novel and far reaching exploration of the many dialogues buildings have with their environmental surroundings Expanding on histories of building technology the book sheds new light on how physical models conventionally understood as engineering experimentation devices enable architectural design speculation The book begins with a catalogue of ten original model prototypes of wind tunnels water tables and filling boxes and is the first of its kind to establish an architectural approach to fabricating such environmental models Subsequent

chapters feature three precedent models that have been largely overlooked within the wider oeuvres of their authors French polymath tienne Jules Marey s 1900 2 wind tunnels Hungarian American architects Victor and Alad r Olgyay s 1955 63 thermoheliodon and Scottish chemist and building ventilation expert David Boswell The Ventilator Reid s 1844 test tube convection experiments Moving between historic moments and the present day between case studies and original prototypes the book reveals the potent ability for models as both physical artefacts and mental ideals to reflect prevailing cultural views about the world and to even reshape those views Fundamentally Architecture s Model Environments illustrates how environmental models reveal design insights across scales from the seam that leaks to the body that feels to the building that mediates to the world that immerses
