**Digital Health, AI and Generative AI in Healthcare** Terry Adirim, 2025-04-25 The purpose of this title is to provide a comprehensive foundation for all medical professionals and healthcare professions students in understanding Artificial Intelligence (AI). With the advent of generative AI, including the release of OpenAI's ChatGPT in 2022, the world entered a new age of rapid advancements in technology that will significantly change the way clinicians practice medicine, operate healthcare institutions, and conduct research. At the heart of this penetrating book is the idea that medical schools, medical training programs, and other health education institutions must undertake a key role in developing AI literacy for clinicians across the spectrum of medical education that includes all health professions. Moreover, assert the authors, AI literacy should be incorporated within medical school curriculums as a core competency, as well as into graduate medical education training programs and continuing medical education courses. This timely and easy-to-read guide offers a wide range of chapters that discuss the core concepts and issues relating to AI in medicine, including a basic understanding of algorithms, machine learning, large language models, and natural language processing; the limits and pitfalls of AI; ethical and legal issues; the evolving regulatory landscape around AI; as well as how AI is currently being used in healthcare, to name just several compelling topics. Additionally, AI technologies will change how medical school curriculums are delivered and how student competencies are assessed. Therefore, medical educators will not only need to rethink how and what medical information is conveyed to students during formal instruction but also must be prepared for AI-powered programs being used to assess students and trainees for the purpose of licensure and board certification. A timely and soon-to-be gold standard resource in the field. **Digital Health, AI and Generative AI: A Concise Practical Guide for Clinicians** will be of great interest to medical professionals, trainees, administrators, policymakers, and anyone interested in the fast-evolving intersection of digital technologies and healthcare.

### **Architectural Analysis and Performance Characterization of NVIDIA GPUs Using Microbenchmarking**

Saktheesh Subramoniapillai Ajeetha, 2012

Abstract: Emergence of new Graphical Processors for general purpose computing presents new challenges for application developers. Graphical Processors vary in terms of number of processor cores per chip, processor speed, and memory subsystems. NVIDIA's CUDA provides a C-like abstraction layer for software developers to implement their applications on GPUs, often with little knowledge of the underlying hardware, and they are forced to work with high-level descriptions documented by the manufacturer. Substantial knowledge of the hardware architecture will be

useful for harvesting the full potential of GPU architectures while trying to solve complex parallel programming problems This work reports the measurements and characterization of performance of several NVIDIA GPU s using micro benchmark analysis Our thesis uses and adapts the CUDA Micro benchmarks 8 and SHOC benchmarks 9 to characterize the important aspects of NVIDIA s GTX200 series GPU architecture machine GTX280 and Fermi series architecture machines GTX580 Tesla C2050 The investigation is conducted by performing a micro architectural analysis of these machines and comparing their basic performance parameters This thesis presents an experiment based methodology for characterizing the properties of the arithmetic pipelines We also measure the global and shared memory latency and bandwidth of these machines and validate the hardware characteristics presented in CUDA programming guide We hope that the insights from this work will be useful for improving the analysis and performance optimization of CUDA programs
