**Digital Business and Intelligent Systems** Audronė Lupeikienė, Jolita Ralytė, Gintautas Dzemyda, 2024-06-22 This book constitutes the refereed proceedings of the 16th International Baltic Conference on Digital Business and Intelligent Systems Baltic DB IS 2024 held in Vilnius Lithuania during June 30 July 3 2024 The 13 full papers and 3 short papers presented here were carefully reviewed and selected from 36 submissions and focus on the various fields

of Business digitalization and development of intelligent business systems Abstracts from the keynote speeches from the conference are also included in these proceedings *Beyond Physical Design: Practical Flow Engineering for Next-Generation SoCs* Dr. Subodh Sachan, Prof. Dr. Punit Goel, Niharika Singh, Dr. K Yogesh, 2026-03-08

The field of System on Chip SoC design has entered an era of unprecedented complexity where traditional approaches to physical design no longer suffice. As the semiconductor industry pushes forward into advanced process nodes, chip designers are confronted with a host of challenges: ever-shrinking feature sizes, increasing power constraints, and ever-demanding performance metrics. In this new era, it is clear that the process of bringing a concept from an idea to a production-ready chip requires more than just following prescribed steps; it demands a profound understanding of flow engineering and the ability to adapt to real-world constraints.

*Beyond Physical Design: Practical Flow Engineering for Next Generation SoCs* is written to fill this gap. This book provides an in-depth exploration of the advanced methodologies, tools, and strategies that drive the successful design and implementation of state-of-the-art SoCs. Rather than focusing solely on traditional design flows, this work introduces readers to the concept of flow engineering, where design flows are seen not as rigid sequences but as adaptive, evolving processes that must be continuously tuned and optimized in real time to meet the demands of modern chip design.

Throughout the book, we emphasize the need for a holistic approach to SoC design, one that integrates physical design with the broader context of system-level goals such as power area performance and manufacturability. By learning how to engineer and orchestrate these design flows, readers can not only leverage existing tools but also innovate in the ways those tools interact and evolve to solve complex design problems.

Drawing on decades of collective experience across the semiconductor industry, academia, and research labs, this book covers real-world design scenarios, including challenges faced on actual design floors. Through case studies, practical examples, and discussions of both successes and setbacks, we aim to equip engineers, researchers, and students with the knowledge and skills to handle the ever-growing complexity of SoC design at advanced nodes.

The journey begins by exploring the fundamentals: placement, routing, and timing, before diving into more advanced topics like flow orchestration at scale, design closure under process variability, machine learning-driven optimization, and future trends like 2.5D/3D integration. Each chapter bridges the gap between traditional knowledge and innovative developments, offering readers a thorough understanding of both foundational principles and innovative techniques that are shaping the future of SoC design.

This is not just another technical book about what tools can do; this is a guide for how engineers make tools work together to solve the complex challenges of today and tomorrow. As we unchain physical design from traditional paradigms, we empower the next generation of SoC designers to excel in an environment where creativity, flexibility, and methodology are as critical as the algorithms and hardware resources they rely on.

By the end of this journey, you will not only understand the latest advancements in SoC physical design but also possess the practical skills to apply them effectively, ensuring success in the fast-paced, ever-changing world of next-generation SoC development.
