Tutorials on Emerging Methodologies and Applications in Operations Research Harvey J. Greenberg,2006-06-16 This volume reflects the theme of the INFORMS 2004 Meeting in Denver Back to OR Roots Emerging as a quantitative

approach to problem solving in World War II our founders were physicists mathematicians and engineers who quickly found peace time uses It is fair to say that Operations Research OR was born in the same incubator as computer science and it has spawned many new disciplines such as systems engineering health care management and transportation science Although people from many disciplines routinely use OR methods many scientific researchers engineers and others do not understand basic OR tools and how they can help them Disciplines ranging from finance to bioengineering are the beneficiaries of what we do we take an interdisciplinary approach to problem solving Our strengths are modeling analysis and algorithm design We provide a quantitative foundation for a broad spectrum of problems from economics to medicine from environmental control to sports from e commerce to computational ometry We are both producers and consumers because the mainstream of OR is in the interfaces As part of this effort to recognize and extend OR roots in future probl solving we organized a set of tutorials designed for people who heard of the topic and want to decide whether to learn it The 90 minutes was spent addressing the questions What is this about in a nutshell Why is it important Where can I learn more In total we had 14 tutorials and eight of them are published here

Operations Research/Management Science at Work Erhan Kozan,Azuma Ohuchi,2002-03-31 There is synergy between the diverse methodologies ofOperations Research and Management Science and the many problems itseeks to solve Operation Research Management Science at Work isan example of that synergy The principal aim of this book is toexamine selected recent research in and applications of OperationalResearch Management Science The focus is on research that is ofindustry interest and covers a wide range of topics from major fieldsof OR MS in a systematic and coherent fashion Each application ischosen to demonstrate the elegance of their implementations The bookmeets the needs of applied researchers who are interested inapplications of OR MS algorithms Moreover real world problemstogether with their solutions and implementations are the applicationsthat have been selected for the volume The Asia Pacific region has embraced business applications of decisionsupport systems in recent years Many of these applications have thestate of the art OR MS techniques in this region embedded in them Hence the increased use of OR MS techniques in this region providesopportunities for identifying methodological advances that are takingplace as a result of the unique nature of the applications These also provide opportunities for exploring synergies and interfaces thatexist between OR MS both in terms of applications and theoreticaladvances

Maffioli, Silvano Martello, 1997-08-28 Wiley Interscience Series in Discrete Mathematics and Optimization Advisory Editors Ronald L. Graham, Jan Karel Lenstra, Robert E. Tarjan. Discrete Mathematics and Optimization involves the study of finite structures and is one of the fastest growing areas in mathematics today. The level and depth of recent advances in the area and the wide applicability of its evolving techniques point to the rapidity with which the field is moving and presage the ever increasing interaction between it and computer science. The Series provides a broad coverage of discrete mathematics and optimization ranging over such fields as combinatorics, graph theory, enumeration, mathematical programming, and the analysis of algorithms, and including such topics as Ramsey theory, transversal theory, block designs, finite geometries, Polya theory, graph and matroid algorithms, network flows, polyhedral combinatorics, and computational complexity. The Wiley Interscience Series in Discrete Mathematics and Optimization will be a substantial part of the record in this extraordinary development. Recent titles in the Series: *Local Search in Combinatorial Optimization* Edited by Emile H. L. Aarts, Philips Research Laboratories, Eindhoven and Eindhoven University of Technology, Eindhoven; Jan Karel Lenstra, Eindhoven University of Technology, Eindhoven and CWI Amsterdam. In the past three decades local search has grown from a simple heuristic idea into a mature field of research in combinatorial optimization. Local search is still the method of choice for NP hard problems as it provides a robust approach for obtaining high quality solutions to problems of a realistic size in a reasonable time. This area of discrete mathematics is of great practical use and is attracting ever increasing attention. The contributions to this book cover local search and its variants from both a theoretical and practical point of view, each with a chapter written by leading authorities on that particular aspect. Chapters 1 to 7 deal with the theory of local search and describe the principal search strategies such as simulated annealing, tabu search, genetic algorithms, and neural networks. The remaining chapters present a wealth of results on applications of local search to problems in management science and engineering, including the traveling salesman problem, vehicle routing, machine scheduling, VLSI design, and code design. This book is an important reference volume and an invaluable source of inspiration for advanced students and researchers in discrete mathematics, computer science, operations research, industrial engineering, and management science.
