Robot Analysis and Control H. Asada, J.-J. E. Slotine, 1991-01-16 Introduces the basic concepts of robot manipulation the fundamental kinematic and dynamic analysis of manipulator arms and the key techniques for trajectory control and compliant motion control Material is supported with abundant examples adapted from successful industrial practice or advanced research topics Includes carefully devised conceptual diagrams discussion of current research topics with references to the latest publications and end of book problem sets Appendixes Bibliography *Robot Analysis and Control* H. Asada, J.-J. E. Slotine, 1991-01-16 Introduces the basic concepts of robot manipulation the fundamental kinematic and dynamic analysis of manipulator arms and the key techniques for trajectory control and compliant motion control Material is supported with abundant examples adapted from successful industrial practice or advanced research topics Includes carefully devised conceptual diagrams discussion of current research topics with references to the latest publications and end of book problem sets Appendixes Bibliography Modelling And Simulation Of Robot Manipulators: A Parallel Processing Approach Albert Y Zomaya, 1993-01-29 This book aims to describe how parallel computer architectures can be used to enhance the performance of robots and their great impact on future generations of robots It provides an in depth consistent and rigorous treatment of the topic A clear definition of tools with results is given which can be applied to parallel processing for robot kinematics and dynamics Another advantageous feature is that the algorithms presented have been implemented using a parallel processing system unlike many publications in the field which have presented results in only theoretical terms This book also includes benchmark results that can be used for the development of future work or can serve as a basis for comparison with other work In addition it surveys useful material to aid readers in pursuing further research **Dynamic Decoupling of Robot Manipulators** Vigen Arakelian, 2018-02-20 This book presents the latest results in the field of dynamic decoupling of robot manipulators obtained in France Russia China and Austria Manipulator dynamics can be highly coupled and nonlinear The complicated dynamics result from varying inertia interactions between the different joints and nonlinear forces such as Coriolis and centrifugal forces The dynamic decoupling of robot manipulators allows one to obtain a linear system i e single input and single output system with constant parameters This simplifies the optimal control and accumulation of energy in manipulators There are two ways to create the dynamically decoupled manipulators via optimal mechanical design or control This work emphasises mechatronic solutions These will certainly improve the known design concepts permitting the dynamic decoupling of serial manipulators with a relatively small increase in total mass of the moving links taking into account the changing payload For the first time such an approach has been applied on serial manipulators Also of great interest is the dynamic decoupling control of parallel manipulators Firstly the dynamic model of redundant multi axial vibration table with load has been established and secondly its dynamic coupling characteristics have been analyzed The discussed methods and applications of dynamic decoupling of robot

manipulators are illustrated via CAD simulations and experimental tests

Field and Service Robotics Alexander Zelinsky, 2012-12-06 Joe Engelberger the pioneer of the robotics industry wrote in his 1989 book *Robotics in Service* that the inspiration to write his book came as a reaction to an industry sponsored forecast study of robot applications which predicted that in 1995 applications of robotics outside factories the traditional domain of industrial robots would amount to less than 1% of total sales Engelberger believed that this forecast was very wrong and instead predicted that the non industrial class of robot applications would become the largest class Engelbergers prediction has yet to come to pass However he did correctly foresee the growth in non traditional applications of robots Robots are now beginning to march from the factories and into field and service applications This book presents a selection of papers from the first major international conference dedicated to field and service applications of robotics This selection includes papers from the leading research laboratories in the world together with papers from companies that are building and selling new and innovative robotic technology It describes interesting aspects of robots in the field ranging from mining agriculture construction cargo handling subsea operations removal of landmines to terrestrial exploration It also covers a diverse range of service applications such as cleaning propagating plants and aiding the elderly and handicapped and gives considerable attention to the technology required to realise robust reliable and safe robots
