Green Internet of Things and Machine Learning Roshani Raut, Sandeep Kautish, Zdzislaw Polkowski, Anil Kumar, Chuan-Ming Liu, 2022-01-10 Health Economics and Financing Encapsulates different case studies where green IOT and machine learning can be used for making significant progress towards improvising the quality of life and sustainable environment The Internet of Things IoT is an evolving idea which is responsible for connecting billions of devices that acquire perceive and communicate data from their surroundings Because this transmission of data uses significant energy improving energy efficiency in IOT devices is a significant topic for research The green internet of things G IoT makes it possible for IoT devices to use less energy since intelligent processing and analysis are fundamental to constructing smart IOT applications with large data sets Machine learning ML algorithms that can predict sustainable energy consumption can be used to prepare guidelines to make IoT device implementation easier Green Internet of Things and Machine Learning lays the foundation of in depth analysis of principles of Green Internet of Things G IoT using machine learning It outlines various green ICT technologies explores the potential towards diverse real time areas as well as highlighting various challenges and obstacles towards the implementation of G IoT in the real world Also this book provides insights on how the machine learning and green IOT will impact various applications It covers the Green IOT and ML based smart computing ML techniques for reducing energy consumption in IOT devices case studies of G IOT and ML in the agricultural field smart farming smart transportation banking industry and healthcare Audience The book will be helpful for research scholars and researchers in the fields of computer science and engineering information technology electronics and electrical engineering Industry experts particularly in R D divisions can use this book as their problem solving guide [Data Deduplication Approaches](#) Tin Thein Thwel, G. R. Sinha, 2020-11-25 In the age of data science the rapidly increasing amount of data is a major concern in numerous applications of computing operations and data storage Duplicated data or redundant data is a main challenge in the field of data science research Data Deduplication Approaches Concepts Strategies and Challenges shows readers the various methods that can be used to eliminate multiple copies of the same files as well as duplicated segments or chunks of data within the associated files Due to ever increasing data duplication its deduplication has become an especially useful field of research for storage environments in particular persistent data storage Data Deduplication Approaches provides readers with an overview of the concepts and background of data deduplication approaches then proceeds to demonstrate in technical detail the strategies and challenges of real time implementations of handling big data data science data backup and recovery The book also includes future research directions case studies and real world applications of data deduplication focusing on reduced storage backup recovery and reliability Includes data deduplication methods for a wide variety of applications Includes concepts and implementation strategies that will help the reader to use the suggested methods Provides a robust set of methods that will help readers to appropriately and judiciously use the suitable methods for their

applications Focuses on reduced storage backup recovery and reliability which are the most important aspects of implementing data deduplication approaches Includes case studies *Energy-Efficient Computing and Data Centers* Luigi Brochard, Vinod Kamath, Julita Corbalán, Scott Holland, Walter Mittelbach, Michael Ott, 2019-08-06 Data centers consume roughly 1% of the total electricity demand while ICT as a whole consumes around 10% Demand is growing exponentially and left unchecked will grow to an estimated increase of 20% or more by 2030 This book covers the energy consumption and minimization of the different data center components when running real workloads taking into account the types of instructions executed by the servers It presents the different air and liquid cooled technologies for servers and data centers with some real examples including waste heat reuse through adsorption chillers as well as the hardware and software used to measure model and control energy It computes and compares the Power Usage Effectiveness and the Total Cost of Ownership of new and existing data centers with different cooling designs including free cooling and waste heat reuse leading to the Energy Reuse Effectiveness The book concludes by demonstrating how a well designed data center reusing waste heat to produce chilled water can reduce energy consumption by roughly 50% and how renewable energy can be used to create net zero energy data centers Proceedings of Ninth International Congress on Information and Communication Technology Xin-She Yang, R. Simon Sherratt, Nilanjan Dey, Amit Joshi, 2024-12-17 This book gathers selected high quality research papers presented at the Ninth International Congress on Information and Communication Technology held in London on February 19 22 2024 It discusses emerging topics pertaining to information and communication technology ICT for managerial applications e governance e agriculture e education and computing technologies the Internet of Things IoT and e mining Written by respected experts and researchers working on ICT the book offers an asset for young researchers involved in advanced studies The work is presented in ten volumes **Green Information Technology** Mohammad Dastbaz, Colin Pattinson, Babak Akhgar, 2015-03-09 We are living in the era of Big Data and the computing power required to deal with Big Data both in terms of its energy consumption and technical complexity is one of the key areas of research and development The U S Environmental Protection Agency estimates that centralized computing infrastructures data centres currently use 7 giga watts of electricity during peak loads This translates into about 61 billion kilowatt hours of electricity used By the EPA s estimates power hungry data centres consume the annual output of 15 average sized power plants One of the top constraints to increasing computing power besides the ability to cool is simply delivering enough power to a given physical space *Green Information Technology A Sustainable Approach* offers in a single volume a broad collection of practical techniques and methodologies for designing building and implementing a green technology strategy in any large enterprise environment which up until now has been scattered in difficult to find scholarly resources Included here is the latest information on emerging technologies and their environmental impact how to effectively measure sustainability discussions on sustainable hardware and software design as well as how to use big data and cloud computing to drive efficiencies and

establish a framework for sustainability in the information technology infrastructure Written by recognized experts in both academia and industry Green Information Technology A Sustainable Approach is a must have guide for researchers computer architects computer engineers and IT professionals with an interest in greater efficiency with less environmental impact Introduces the concept of using green procurement and supply chain programs in the IT infrastructure Discusses how to use big data to drive efficiencies and establish a framework for sustainability in the information technology infrastructure Explains how cloud computing can be used to consolidate corporate IT environments using large scale shared infrastructure reducing the overall environmental impact and unlocking new efficiencies Provides specific use cases for Green IT such as data center energy efficiency and cloud computing sustainability and risk

International Taxation of Cloud Computing
Alexander Weisser,2020-10-07 Cloud computing may be borderless but taxes are territorial It is easy to imagine how the two concepts can clash Much effort has gone into harmonizing tax rules across borders with the result that many jurisdictions have very similar tax rules Even so taxation remains a basic expression of national sovereignty The goal of this thesis is to examine how international tax law applies to the cross border cloud computing business Both multinational providers and customers of cloud computing services are analyzed Reflecting three traditional areas of international tax scholarship the goal could be stated in three questions Which jurisdictions have the right to tax What kinds of cloud computing transactions can be taxed What amount of the profit is taxable In more technical terms this means enquiring into how the use of cloud computing affects the permanent establishment status of taxpayers how the different kinds of cloud computing transactions are characterized under international double taxation treaties and how the calculation of taxable cloud computing profit is affected by transfer pricing In light of the current political events the thesis also offers recommendations de lege lata through a systematic approach Its first part assesses the current taxation of cloud computing The second part evaluates whether the findings of this initial assessment conform to various superior principles of good rulemaking It identifies which of the present tax rules ought to be adapted The final part considers how the rules could be amended to become more compliant with the superior principles In this way Part I embodies the thesis Part II the antithesis and Part III seeks a synthesis
