

Chapter 2

Complex Analysis

In this part of the course we will study some basic complex analysis. This is an extremely useful and beautiful part of mathematics and forms the basis of many subsequent chapters in many branches of mathematics and physics. We will review the complex derivatives and integrals, Cauchy's theorem, for the case of complex functions of a complex variable. In so doing we will meet some analytic functions, which form the core of this part of the course. In fact, for a large range complex analysis is the study of analytic functions. After a brief review of complex numbers as points in the complex plane, we will then discuss analyticity and give plenty of examples of analytic functions. We will then discuss complex integration, commencing with the generalised Cauchy Integral Formula, and some of its applications. We then go on to discuss the power series representations of analytic functions and the various criteria which will allow us to compute many real integrals and infinite sums via complex integration.

2.1 Analytic Functions

In this section we will study complex functions of a complex variable. We will see that differentiability of such a function is a non-trivial property, arising from the concept of an analytic function. We will then study some examples of analytic functions. In fact, the construction of analytic functions will form a basic building for this part of the course.

2.1.1 The complex plane

We already discussed complex numbers briefly in Section 1.3.1. The emphasis in that section was on the algebraic properties of complex numbers, and

Complex Analysis Guantie Deng, Sums of Squares of Integers Carlos J. Moreno, Jr. Wagstaff, 2005-12-09 Sums of Squares of Integers covers topics in combinatorial number theory as they relate to counting representations of integers as sums of a certain number of squares The book introduces a stimulating area of number theory where research continues to proliferate It is a book of firsts namely it is the first book to combine Liouville's elementary methods with the analytic methods of modular functions to study the representation of integers as sums of squares It is the first book to tell how to compute the number of representations of an integer n as the sum of s squares of integers for any s and n It is also the first book to give a proof of Szemerédi's theorem and is the first number theory book to discuss how the modern theory of modular forms complements and clarifies the classical fundamental results about sums of squares The book presents several existing yet still interesting and instructive examples of modular forms Two chapters develop useful properties of the Bernoulli numbers and illustrate arithmetic progressions proving the theorems of van der Waerden Roth and Szemerédi The book also explains applications of the theory to three problems that lie outside of number theory in the areas of cryptanalysis microwave radiation and diamond cutting The text is complemented by the inclusion of over one hundred exercises to test the reader's understanding

Introduction to Inverse Problems for Evolution Equations Masahiro Yamamoto, 2025-08-30 Among several main formulations the book treats inverse problems with single measurements by Carleman estimates and describes a method for proving the uniqueness and the stability for the first order transport equations parabolic equations and hyperbolic equations The book gives self contained derivations of Carleman estimates which do not rely on any general theory and simplified application method of the Carleman estimates to the inverse problems Thus the target audience is graduate students of faculty of sciences and interested graduate students from engineering fields The book tries to limit the preliminary knowledge to a standard 4 year undergraduate course In order to master the methodology we restrict equations within first order transport equations parabolic equations and hyperbolic equations but it is expected to apply the same methods for other evolution equations such as fluid dynamics

New Foundations in Mathematics Garret Sobczyk, 2012-10-28 The first book of its kind New Foundations in Mathematics The Geometric Concept of Number uses geometric algebra to present an innovative approach to elementary and advanced mathematics Geometric algebra offers a simple and robust means of expressing a wide range of ideas in mathematics physics and engineering In particular geometric algebra extends the real number system to include the concept of direction which underpins much of modern mathematics and physics Much of the material presented has been developed from undergraduate courses taught by the author over the years in linear algebra theory of numbers advanced calculus and vector calculus numerical analysis modern abstract algebra and differential geometry The principal aim of this book is to present these ideas in a freshly coherent and accessible manner New Foundations in Mathematics will be of interest to undergraduate and graduate students

of mathematics and physics who are looking for a unified treatment of many important geometric ideas arising in these subjects at all levels The material can also serve as a supplemental textbook in some or all of the areas mentioned above and as a reference book for professionals who apply mathematics to engineering and computational areas of mathematics and physics

Linear and Complex Analysis Problem Book 3 Nikolai Kapitonovich Nikol'skiĭ, Viktor Petrovich Khavin, 1994 Presents a collection of unsolved problems of modern analysis designed as informally written mini articles each containing not only a statement of a problem but also historical and methodological comments motivation conjectures and discussion of possible connections of plausible approaches as well as a list of references *Linear and Complex Analysis Problem Book 3* Victor P. Havin, Nikolai K. Nikolski, 1994-04-28 The 2 volume book is an updated reorganized and considerably enlarged version of the previous edition of the Research Problem Book in Analysis LNM 1043 a collection familiar to many analysts that has sparked off much research This new edition created in a joint effort by a large team of analysts is like its predecessor a collection of unsolved problems of modern analysis designed as informally written mini articles each containing not only a statement of a problem but also historical and methodological comments motivation conjectures and discussion of possible connections of plausible approaches as well as a list of references There are now 342 of these mini articles almost twice as many as in the previous edition despite the fact that a good deal of them have been solved

The Calabi-Yau Landscape Yang-Hui He, 2021-07-31 Can artificial intelligence learn mathematics The question is at the heart of this original monograph bringing together theoretical physics modern geometry and data science The study of Calabi Yau manifolds lies at an exciting intersection between physics and mathematics Recently there has been much activity in applying machine learning to solve otherwise intractable problems to conjecture new formulae or to understand the underlying structure of mathematics In this book insights from string and quantum field theory are combined with powerful techniques from complex and algebraic geometry then translated into algorithms with the ultimate aim of deriving new information about Calabi Yau manifolds While the motivation comes from mathematical physics the techniques are purely mathematical and the theme is that of explicit calculations The reader is guided through the theory and provided with explicit computer code in standard software such as SageMath Python and Mathematica to gain hands on experience in applications of artificial intelligence to geometry Driven by data and written in an informal style *The Calabi Yau Landscape* makes cutting edge topics in mathematical physics geometry and machine learning readily accessible to graduate students and beyond The overriding ambition is to introduce some modern mathematics to the physicist some modern physics to the mathematician and machine learning to both
