Learning Python Web Penetration Testing Christian Martorella, 2018-06-27 Leverage the simplicity of Python and available libraries to build web security testing tools for your application

Key Features

- Understand the web application penetration testing methodology and toolkit using Python
- Write a web crawler spider with the Scrapy library
- Detect and exploit SQL injection vulnerabilities by creating a script all by yourself

Book Description

Web penetration testing is the use of tools and code to attack a website or web app in order to assess its vulnerability to external threats While there are an increasing number of sophisticated ready made tools to scan systems for vulnerabilities the use of Python allows you to write system specific scripts or alter and extend existing testing tools to find exploit and record as many security weaknesses as possible

Learning Python Web Penetration Testing will walk you through the web application penetration testing methodology showing you how to write your own tools with Python for each activity throughout the process The book begins by emphasizing the importance of knowing how to write your own tools with Python for web application penetration testing You will then learn to interact with a web application using Python understand the anatomy of an HTTP request URL headers and message body and later create a script to perform a request and interpret the response and its headers As you make your way through the book you will write a web crawler using Python and the Scrapy library The book will also help you to develop a tool to perform brute force attacks in different parts of the web application You will then discover more on detecting and exploiting SQL injection vulnerabilities By the end of this book you will have successfully created an HTTP proxy based on the mitmproxy tool

What you will learn

- Interact with a web application using the Python and Requests libraries
- Create a basic web application crawler and make it recursive
- Develop a brute force tool to discover and enumerate resources such as files and directories
- Explore different authentication methods commonly used in web applications
- Enumerate table names from a database using SQL injection
- Understand the web application penetration
