Lin,Bryan L. Shader,2022-07-21 This book provides an introduction to the inverse eigenvalue problem for graphs IEP G and the related area of zero forcing propagation and throttling The IEP G grew from the intersection of linear algebra and combinatorics and has given rise to both a rich set of deep problems in that area as well as a breadth of ancillary problems in related areas The IEP G asks a fundamental mathematical question expressed in terms of linear algebra and graph theory but the significance of such questions goes beyond these two areas as particular instances of the IEP G also appear as major research problems in other fields of mathematics sciences and engineering One approach to the IEP G is through rank minimization a relevant problem in itself and with a large number of applications During the past 10 years important developments on the rank minimization problem particularly in relation to zero forcing have led to significant advances in the IEP G The monograph serves as an entry point and valuable resource that will stimulate future developments in this active and mathematically diverse research area
