Guide to Simulation and Modeling for Biosciences David J. Barnes,Dominique Chu,2015-09-01 This accessible text presents a detailed introduction to the use of a wide range of software tools and modeling environments for use in the biosciences as well as the fundamental mathematical background The practical constraints presented by each modeling technique are described in detail enabling the researcher to determine which software package would be most useful for a particular problem Features introduces a basic array of techniques to formulate models of biological systems and to solve them discusses agent based models stochastic modeling techniques differential equations spatial simulations and Gillespie s stochastic simulation algorithm provides exercises describes such useful tools as the Maxima algebra system the PRISM model checker and the modeling environments Repast Simphony and Smoldyn contains appendices on rules of differentiation and integration Maxima and PRISM notation and some additional mathematical concepts offers supplementary material at an associated website **Advances in Applied Human Modeling and Simulation** Vincent G. Duffy,2012-07-09 An examination of the various types of human modeled technology Advances in Applied Human Modeling and Simulation not only covers the type of models available but how they can be applied to solve specific problems These models provide a representation of some human aspects that can be inserted into simulations or virtual environments and facilitate prediction of safety satisfaction usability performance and sustainability Topics include Anthropometry and human functional data Biomechanics occupational safety comfort and discomfort Biometric authentications Driving safety and human performance Enhancing human capabilities through aids or training Fuzzy systems and neural computing Human behavior and risk assessment modeling Integrating software with humans and systems International cooperation in education and engineering research Intelligent agents in decision training Intelligent data and text mining Machine learning and human factors Modeling physical aspects of work Monitoring systems and human decision Psychophysiological indicators of emotion Resilience engineering and human reliability Scenario based performance in distributed enterprises Special populations Sustainability earth sciences and engineering System of systems architecting and engineering Verification and validation Virtual interactive design and assessment The math and science provides a foundation for visualizations that can facilitate decision making by technical experts management or those responsible for public policy In considering a systems perspective and decisions that affect performance these models provide opportunities for an expanded role of engineers and HF E specialists to meet technical challenges worldwide They can also be used to improve time to market increase safety and ultimately the effectiveness of an organization The book focuses on applications of these newly developed models and predictive capabilities useful to human factors and ergonomics engineers cognitive engineers human computer interaction engineers human performance modeling engineers and students in related fields Systems Science and Population Health Abdulrahman M.    Urban Disaster Resilience and Security Alexander Fekete,Frank Fiedrich,2017-12-04 This edited book investigates the interrelations of disaster impacts resilience and security in an urban context Urban as a term captures megacities cities and generally human settlements that are characterised by concentration of quantifiable and non quantifiable subjects objects and value attributions to them The scope is to narrow down resilience from an all encompassing concept to applied ways of scientifically attempting to measure this type of disaster related resilience 28 chapters in this book reflect opportunities and doubts of the disaster risk science community regarding this measurability Therefore examples utilising both quantitative and qualitative approaches are juxtaposed This book concentrates on features that are distinct characteristics of resilience how they can be measured and in what sense they are different to vulnerability and risk parameters Case studies in 11 countries either use a hypothetical pre event estimation of resilience or are addressing a revealed resilience evident and documented after an event Such information can be helpful to identify benchmarks or margins of impact magnitudes and related recovery times volumes and qualities of affected populations and infrastructure
