Ford's first overhead valve V8 and it established an impressive high performance legacy winning many races in NASCAR and setting records at the Bonneville Salt Flats. This venerable Ford engine which powers classic Thunderbirds, Crown Victorias, Edsels and other cars is enjoying a performance renaissance. Many aftermarket parts including heads can turn a sedate Y block into a powerhouse. The engine earned its name from its deep skirt block design that looked like a Y. This stout engine was installed in millions of Ford cars from 1954 to 1962 and Ford trucks from 1952 to 1964. Author and Ford tech expert Charles Morris explains each critical aspect of rebuilding a stock 239, 256, 272, 292 and 312 ci Y block and building a modified Y block. He shows you how to identify components and conduct a thorough inspection so you select a sound block, heads, intake and other components. He explains the specifics for obtaining high quality machining work and verifying clearances. In addition, he delves into the intricacies of each step of the assembly process so you can rebuild a strong running and reliable engine. Most important, Morris details the steps to effectively remedy the Y block oiling problems. This is the book Ford Y block owners and fans have been waiting for. It's an indispensable guide for performing a professional caliber rebuild and buildup of the Y block.

Hunter, Gabriel Coll, Asya Akca, Schuyler Moore, 2021-10-08 CSIS's *The Future of Military Engines* looks at the state of the U S military engine industrial base and the choices confronting policymakers at the Department of Defense DoD The military engine industrial base is closely tied to the industrial base for commercial engines U S engine providers use many of the same facilities and largely the same supply chain for military and commercial engines The ability to leverage commercial supply chains is critical because supply chain quality underlies the performance advantage of U S military engines both for individual aircraft and military aircraft fleets International competitors such as Russia and China are seeking to overtake the U S in engines However the current U S advantage is sustainable if it is treated as a national priority Many military aircraft especially fighters require engines with important differences from commercial aircraft They fly different flight profiles and perform different jobs These differences mean that while DoD can leverage the commercial engine industrial base it must also make investments to sustain the industrial base's unique military components In the next few years DoD investment in military engines is projected to decrease significantly particularly for R D This presents a challenge as military unique engineering skills are highly perishable Four major policy choices confront DoD as it formulates its investment approach to military engines going forward 1 Priority 2 Resources 3 Business Model and 4 Competition The DoD is at an inflection point for engine investment and the time for choosing on these four key policy questions will come in the next few years **Ford**
