Problems in Real Analysis Charalambos D. Aliprantis,Owen Burkinshaw,1999 This volume aims to teach the basic methods of proof and problem solving by presenting the complete solutions to over 600 problems that appear in the

companion Principles of Real Analysis 3rd edition *Calculus of Variations and Optimal Control* N. P. Osmolovskii, 1998-08-18 The theory of a Pontryagin minimum is developed for problems in the calculus of variations The application of the notion of a Pontryagin minimum to the calculus of variations is a distinctive feature of this book A new theory of quadratic conditions for a Pontryagin minimum which covers broken extremals is developed and corresponding sufficient conditions for a strong minimum are obtained Some classical theorems of the calculus of variations are generalized

Algebraic Groups and Their Birational Invariants V. E. Voskresenskii, V. E. VoskresenskiuI and Boris Kunyavski, 2011-10-06 Since the late 1960s methods of birational geometry have been used successfully in the theory of linear algebraic groups especially in arithmetic problems This book which can be viewed as a significant revision of the author s book Algebraic Tori Nauka Moscow 1977 studies birational properties of linear algebraic groups focusing on arithmetic applications The main topics are forms and Galois cohomology the Picard group and the Brauer group birational geometry of algebraic tori arithmetic of algebraic groups Tamagawa numbers R equivalence projective toric varieties invariants of finite transformation groups and index formulas Results and applications are recent There is an extensive bibliography with additional comments that can serve as a guide for further reading **Characters of Finite Groups I** A. G. Berkovich, E. M. Zhmud_, 1998-09-29 This book places character theory and its applications to finite groups within the reach of people with a comparatively modest mathematical background The work concentrates mostly on applications of character theory to finite groups The main themes are degrees and kernels of irreducible characters the class number and the number of nonlinear irreducible characters values of irreducible characters characterizations and generalizations of Frobenius groups and generalizations of monomial groups The presentation is detailed and many proofs of known results are new *Selected Topics in Integral Geometry* Izrail_ Moiseevich Gel_fand, Semen Grigor_evich Gindikin, Mark Iosifovich Graev, 2003-09-02 The miracle of integral geometry is that it is often possible to recover a function on a manifold just from the knowledge of its integrals over certain submanifolds The founding example is the Radon transform introduced at the beginning of the 20th century Since then many other transforms were found and the general theory was developed Moreover many important practical applications were discovered the best known but by no means the only one being to medical tomography The present book is a general introduction to integral geometry the first from this point of view for almost four decades The authors all leading experts in the field represent one of the most influential schools in integral geometry The book presents in detail basic examples of integral geometry problems such as the Radon transform on the plane and in space the John transform the Minkowski Funk transform integral geometry on the hyperbolic plane and in the hyperbolic space the horospherical transform and its relation to representations of $SL(2, \mathbb{C})$ integral geometry on quadrics etc The study of these examples allows the authors to explain important general topics of integral geometry such as the Cavalieri conditions local and nonlocal inversion formulas and overdetermined problems Many of the results in the book were obtained by the
