Standard Test Methods for Measuring Adhesion by Tape Test¹

1. Scope

1.1 These test methods cover procedures for assessing the adhesion of coating films to metallic substrates by applying and removing pressure-sensitive tape over cuts made in the film. Page No 1

3.1 *Test Method A*—An X-cut is made in the film to the substrate, pressure-sensitive tape is applied over the cut and then removed, and adhesion is assessed qualitatively on the 0 to 5 scale. Page No 1

Rating	Description
5A	No peeling or removal
4A	Trace peeling or removal along the incisions
3A	Jagged removal along the incisions up to 1/16" on either side
2A	Jagged removal along the incisions up to 1/8" on either side
1A	Removal of most of the coating from the area of the "X" under the tape
0A	Removal of coating beyond the area of the "X"

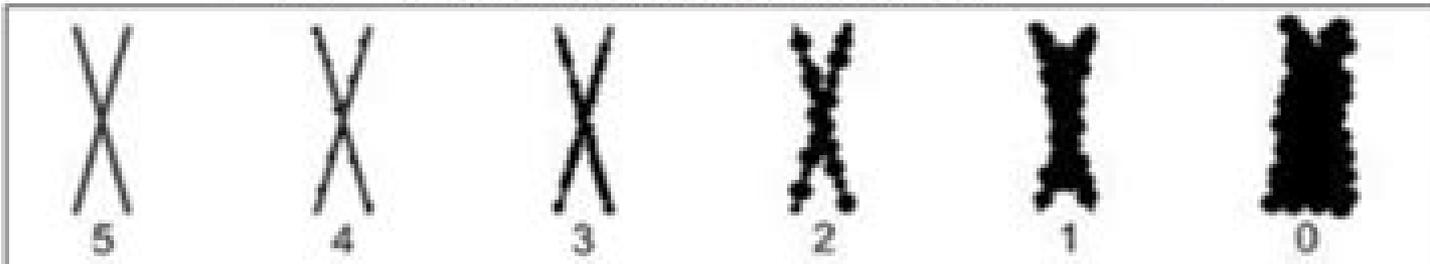

1. Cut "X" mark

2. Place 25mm wide Transparent Tape.

Encyclopedia of Polymer Degradation George Wypych, 2025-01-23 Encyclopedia of Polymer Degradation compiles research results for the most important and commonly used polymers identifying their unitary degradative chemical reactions including the fate of products resulting from primary degradation which can influence further degradation mechanisms and rates The book proposes potential mechanisms of reactions and chemical descriptions of the sequence for events for each degradation mode It takes a knowledge based approach with the aim of facilitating more effective prevention of waste and environmental pollution caused by material failures and also discusses the limitations of typical weathering studies challenges in lab based weathering studies and the importance of understanding various degradation mechanisms Outlines the limitations of typical weathering studies considering how they take place in natural outdoor environments where conditions aren t controlled and discussing how these limitations can be effectively dealt with Covers challenges in laboratory weathering studies and how these can be overcome Emphasizes the importance of understanding degradation mechanisms enabling the selection of the most resistant materials for specific applications and the development of effective stabilization strategies to protect materials against degradation

Corrosion Science and Engineering Pietro Pedferri, 2018-09-21 This textbook discusses the latest advances in the corrosion of metals and related protection methods and explores all corrosion related aspects used in natural and industrial environments including monitoring and testing Throughout the textbook the science and engineering of corrosion are merged to help readers perform correct corrosion assessments in both the design phase and plant

management phase and to define the optimal protection technique In addition the book addresses basic aspects of corrosion science including the electrochemical mechanism thermodynamic and kinetic aspects the use of Pourbaix and Evans diagrams and various forms of corrosion from uniform to localised to stress corrosion phenomena as well as the protection systems adopted to combat corrosion including inhibitors coatings and cathodic protection Such basic knowledge is fundamental to understanding the corrosion engineering approach applied to the durability of metals immersed in water buried in soil exposed to the atmosphere used in reinforced concrete in the human body and in petrochemical plants or at risk of high temperature corrosion A final chapter is dedicated to the use of statistics in corrosion All chapters include exercises and practical examples to help students understand predict evaluate and mitigate corrosion problems As such the book offers the ideal learning resource for all students of corrosion courses in chemical mechanical energy and materials engineering at the graduate and advanced undergraduate level as well as a valuable reference guide for engineers whose work involves real world applications

Techniques for Protecting Overhead Lines in Winter Conditions Masoud Farzaneh, William A. Chisholm, 2022-02-10 This book offers a comprehensive review of the various options for improving the performance of overhead power lines in winter conditions taking into account both mechanical and electrical aspects Experience within the CIGRE community reveals many strategies to protect overhead power lines from damage caused by heavy build up of ice and snow or electrical issues such as insulator icing flashovers The initial approach is to consider the predicted ice loads from the available databases This is supplemented with some fundamental aspects of icing physics that affect accretion rate as well as factors in ice shedding on traditional metal ceramic and novel treated surfaces These ice physics concepts structure the ways to categorize and evaluate methods to reduce or prevent icing on conductors and ground wires or to prevent flashover of insulators Many utilities in cold climate regions have developed and used methods and strategies to reduce ice loads using anti icing AI and or de icing DI methods In general AI methods are used before or early during ice build up while DI methods are activated during and sometimes after ice build up The book describes and discusses some historical operational or potential AI DI systems in the ice physics context This supports a comprehensive review of AI coatings including concepts relevant material properties application methods and finally test methods for characterizing the long term performance

Corrosion Control in the Oil and Gas Industry Sankara Papavinasam, 2013-10-15 The effect of corrosion in the oil industry leads to the failure of parts This failure results in shutting down the plant to clean the facility The annual cost of corrosion to the oil and gas industry in the United States alone is estimated at 27 billion According to NACE International leading some to estimate the global annual cost to the oil and gas industry as exceeding 60 billion In addition corrosion commonly causes serious environmental problems such as spills and releases An essential resource for all those who are involved in the corrosion management of oil and gas infrastructure Corrosion Control in the Oil and Gas Industry provides engineers and designers with the tools and methods to design and implement comprehensive corrosion

management programs for oil and gas infrastructures The book addresses all segments of the industry including production transmission storage refining and distribution Selects cost effective methods to control corrosion Quantitatively measures and estimates corrosion rates Treats oil and gas infrastructures as systems in order to avoid the impacts that changes to one segment if a corrosion management program may have on others Provides a gateway to more than 1 000 industry best practices and international standards

Thermal Spray Removal of Lead-based Paint from the Viaduct Bridge at Rock Island Arsenal, IL J. H. Boy, Robert Weber, Ashok Kumar, 1998 Lead based paint has in the past been used on many steel structures to control corrosion Peeling lead based paint cannot be overcoated but must be removed During removal by conventional techniques a tight containment structure is required to keep lead dust from contaminating air soil or water and special worker protection is required These protective measures are cumbersome and expensive This report documents a field demonstration at the Rock Island Arsenal IL that validated the thermal spray vitrification TSV process as a safe and effective technique for removing lead based paint from a steel bridge Specially formulated glass was applied in a molten state to painted steel using a conventional thermal spray application system The molten glass reacts with the paint and encapsulates the lead The cooled glass readily cracks and falls off removing the paint After onsite remelting of the glass waste to complete the encapsulation process the final waste product is chemically inert and may be disposed of in a regular landfill The Illinois Environmental Protection Agency Division of Air Pollution Control determined that the glass remelt process could be considered a paint removal operation for which no air quality permit was required *63rd Porcelain Enamel Institute Technical Forum* Porcelain Enamel Institute.
